

Overview of the latest LHCb results

Thursday, 13 March 2014 11:30 (45 minutes)

During the first LHC run in 2011 and 2012, the LHCb experiment has collected a total of 3/fb of proton-proton collision data at a centre-of-mass energy of 7 and 8 TeV. These data has allowed to perform a wide variety of analysis in B, D and Kaon decays as well as electroweak and QCD measurements in the unique rapidity region $2 < \eta < 5$ covered by the LHCb detector. An overview of the latest LHCb results will be given, covering rare meson decays, CP violation in B mesons, charm physics, spectroscopy, QCD and electroweak measurements

Presenter: VAZQUEZ-GOMEZ, Ricardo (INFN LNF)
