Meson resonances on the lattice

Thursday, July 2, 2015 12:30 PM (40 minutes)

There has been recent, significant, advances in the determination of the meson spectrum of QCD. Current efforts have focused on the development and application of finite-volume formalisms that allow for the determination of scattering amplitudes as well as resonance behaviour in coupled channel systems. I will review some of these recent developments, and demonstrate the viability of the method in meson systems.

Presenter: EDWARDS, Robert (Jefferson Lab)

Session Classification: Plenary Session 8
