

Fast and Full simulation comparison with $B^0 \rightarrow D^*K$

Dave Brown
Aritoki Suzuki

Lawrence Berkeley Laboratory
University of California Berkeley

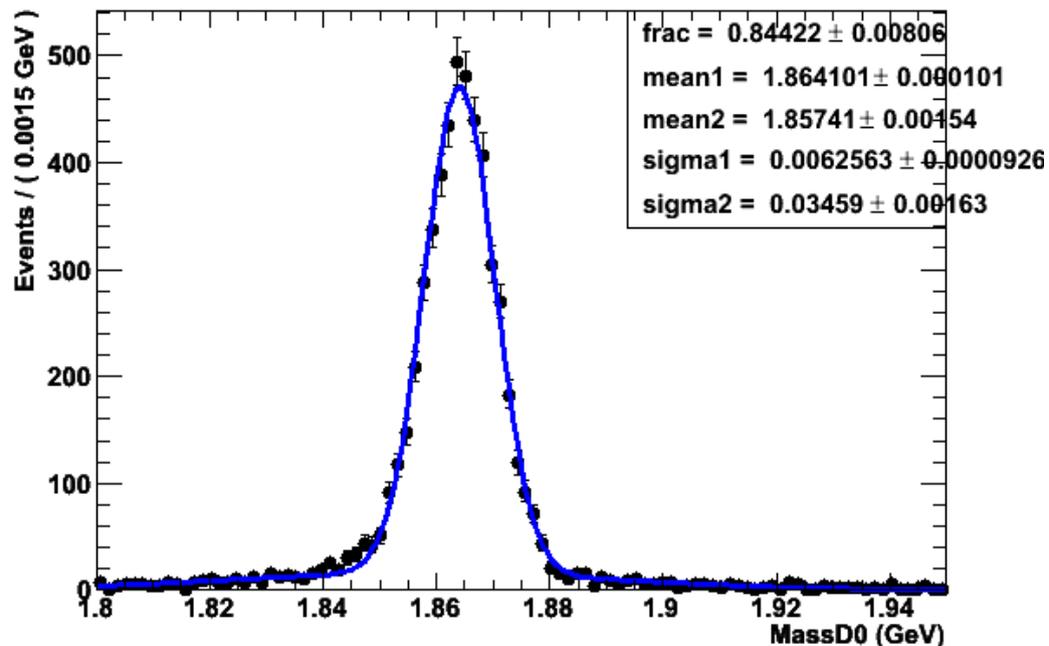

December 16th 2008

Event Selection

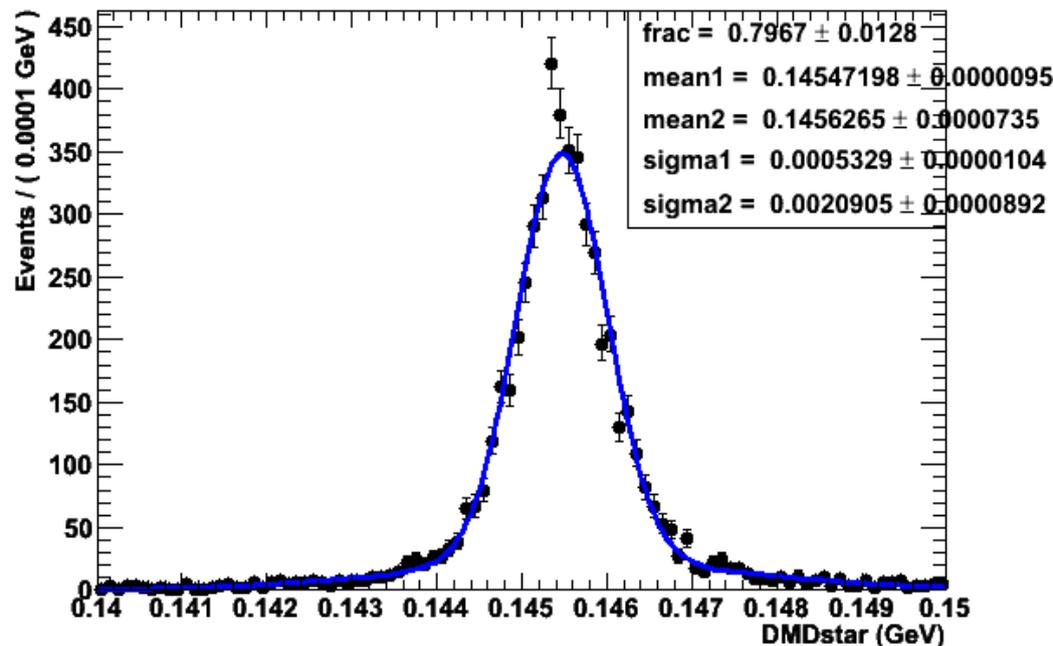

- Events without B^0 candidate is removed
 - 31.5% removed for FastSim
 - 43.2% removed for FullSim
- For events that have more than one B^0 candidate
 - Candidate with smallest $|\Delta E|$ was selected
 - 4.5% of events had multiple candidates for FastSim
 - 6.6% of events had multiple candidates for FullSim

pacsim MES DGauss

Conclusion

- PDF from **FastSim** shows agreement with **FullSim** PDF.
 - Core mass resolutions agree within **5%**
 - Tail resolutions are **5->40%** narrower in FastSim
 - Tail fraction is roughly the same
- Efficiency showed some discrepancy (**~10%** absolute)

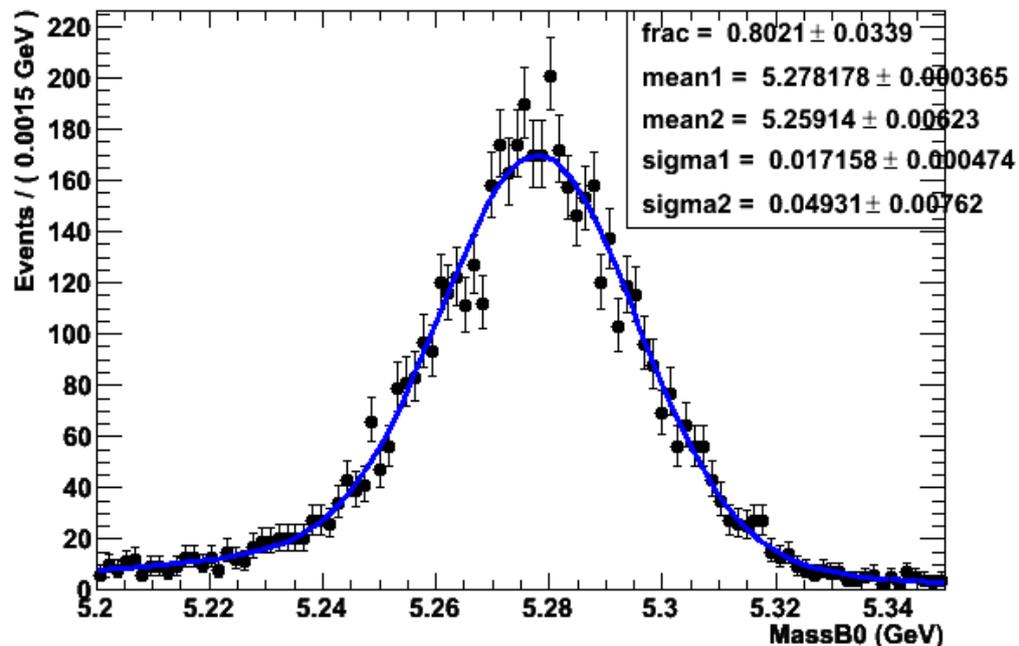

Future Plan

- Verify more variables on FastSim against FullSim
 - Vertexing
 - Neutral Track
 - etc
- Understand efficiency discrepancy
- Study various detector configuration
