## Results of the ARGO-YBJ experiment in detection of gamma rays

*Tuesday, September 15, 2015 10:00 AM (25 minutes)*

The ARGO-YBJ air shower detector has been in stable data taking for five years at the YangBaJing Cosmic Ray Laboratory (Tibet, P.R. China, 4300m a.s.l.) with a duty cycle >86% and an energy threshold of a few hundreds of GeV. With the scaler mode technique, the minimum threshold of 1 GeV can be reached. In this talk a selection of results in gamma ray astronomy will be presented, including those from the study of the diffuse emission from the Galactic plane.
