

Reconstruction for INSIDE 1vs 1 prototype

Giovanni Pirrone, Niccolò Camarlinghi

Inside meeting, Roma 18 December 2014

Inside 1vs1 reconstruction software

- Number of modules 2
- Face to face distance 15 cm
- Number of crystal per module 256
- Crystal size 3mm
- Pitch 3.2 mm
- FOV size $51 \times 51 \times 51 \text{ mm}^3$
- Voxel size $1.5 \times 1.5 \times 1.5 \text{ mm}^3$
- Model size 256Mb
- SRM $4 \times 4 \times 8$ rays per crystal
- DOI modeling

Next beam test

LSF + Hamamatsu SiPM matrix

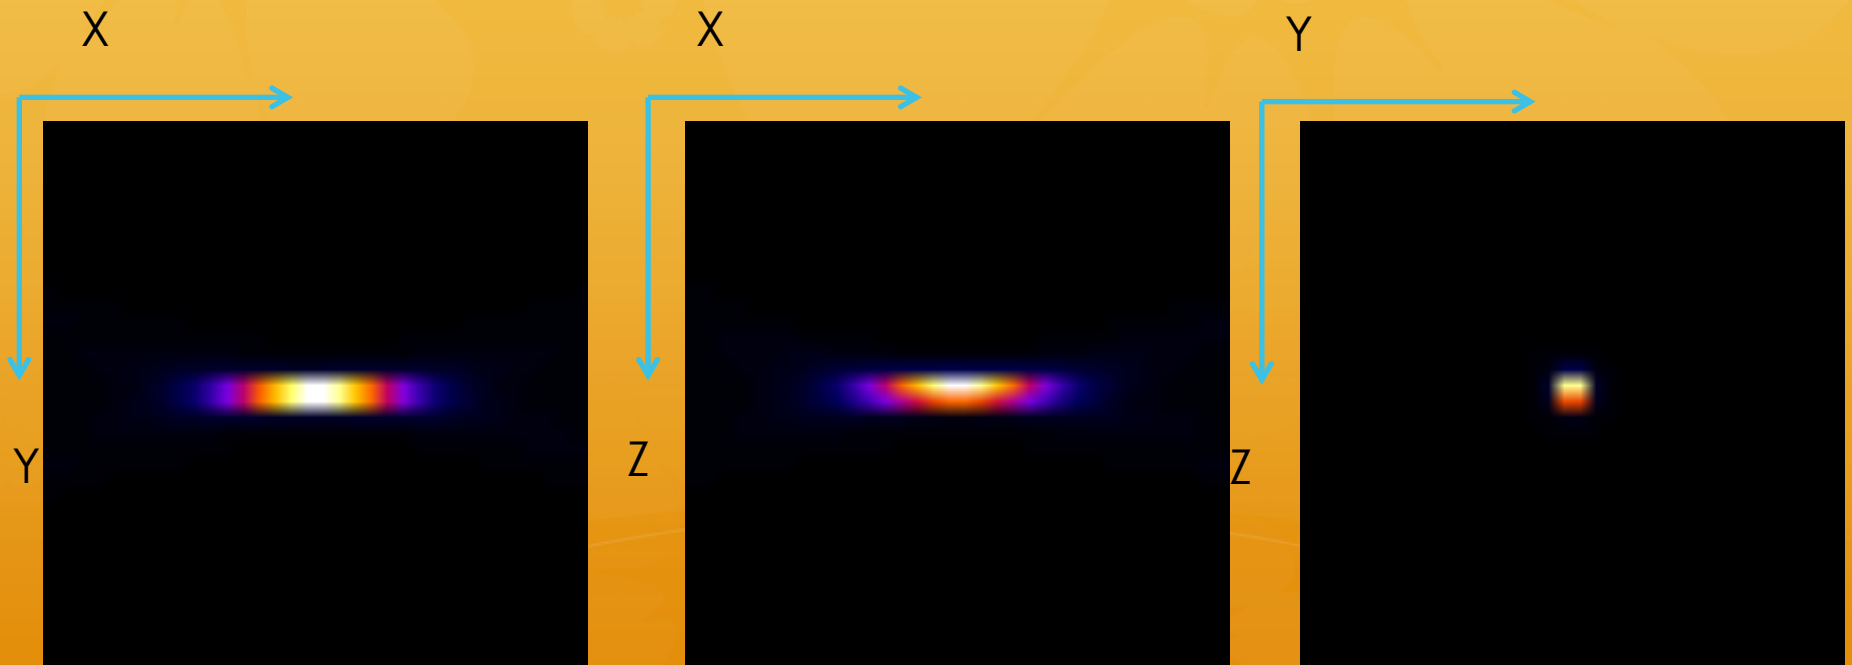

(R. Wheadon, Torino)

(G. Pirrone, Pisa)

Point source in the FOV center

Gate simulation:

- Acquisition: 120 s
- Activity 300 k Bq (8 μ Ci)
- Na^{22} 0.25 mm radius in a PMMA cube of $10 \times 10 \times 10 \text{ mm}^3$

Recon parameters

- 5 iterations performed

Point source 10 mm along Z

Gate simulation:

- Acquisition: 120 s
- Activity 300 k Bq (8 μ Ci)
- Na^{22} 0.25 mm radius in a PMMA cube of $10 \times 10 \times 10 \text{ mm}^3$

Recon parameters

- 5 iterations performed

Summary

- ❁ To be done:
 - ❁ Reconstruction with a smaller pixels
 - ❁ Validating on other simulation data and real data
- ❁ Issue to discuss before the next data taking
 - ❁ Preprocessing/Calibration sw?
 - ❁ Normalization :
 - ❁ Build the phantom (DoPET1 phantom still available?)
 - ❁ Perform the normalization (CNR) before next data taking ^{18}F FDG
 - ❁ Computer for recon/analysis?
