Understanding Transverse Momentum Dependent Functions from data.

Monday, 21 September 2015 17:10 (20 minutes)

The role of TMDs in understanding the 3D-structure of hadrons has drawn a lot of interest in both the theoretical and experimental communities. In order to extract TMDs, it is necessary to understand what information is contained in the different sets of data that are available. In this talk, I will discuss the advantages and limitations of some of the most recent experimental data, in the context of TMD-extraction.
