

Short and mid-term perspectives

. Next experiment at the Tandem in Orsay

- test of prototypes
- test of electronics (iPACI, peak finder)

. The MUGAST configuration @ AGATA

- configuration
- physics cases

. MUGAST configuration on LISE

M. Assié, IPN Orsay
assie@ipno.in2p3.fr

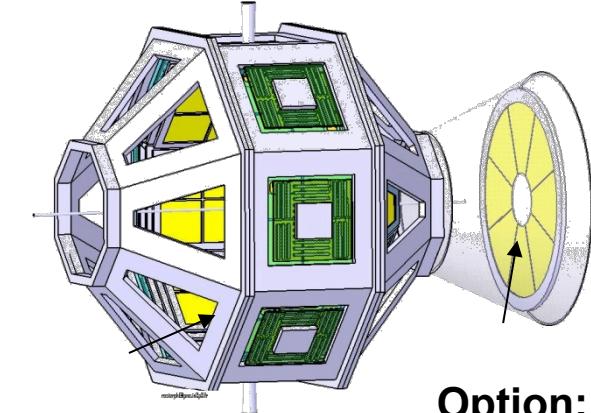

Prototypes for GASPARD-TRACE

Ordered to Micron :

- **2 trapez.** prototypes DSSSD ordered by IPN in Nov. 2013 delivery expected **end of April 2015**
- **2 square** prototypes ordered by INFN end of 2014 + **1 thick square DSSSD**

→ very large (close to 6 inches) thin layers

→ Thick 6 inches layers are challenging

Trapezoidal shapes for endcaps

Option:
Annular
detectors

Prototypes for GASPARD-TRACE

Ordered to Micron

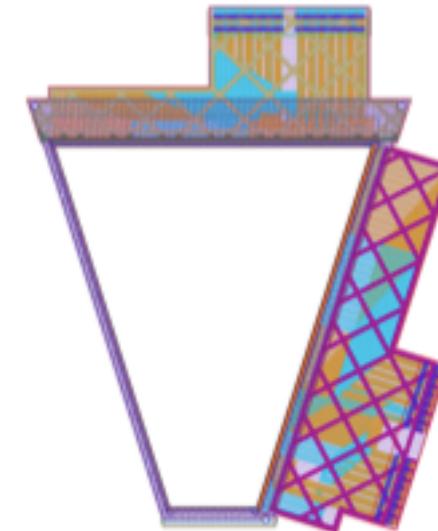

- **2 trapez.** prototypes DSSSD ordered by IPN in Nov. 2013 delivery expected **end of April 2015**
- **2 square** prototypes ordered by INFN end of 2014 + **1 thick square DSSSD**

Next steps :

after validation of prototypes (see next slides) :

1 trapez. detector to be ordered by **Surrey**

1 trapez. detector to be ordered by **IPN-Orsay**

Total nb of detectors :

First layer (500um)

- 4 trapez. detectors
- 2 square detectors

2nd layer

- 1 thick (1.5mm) square detector

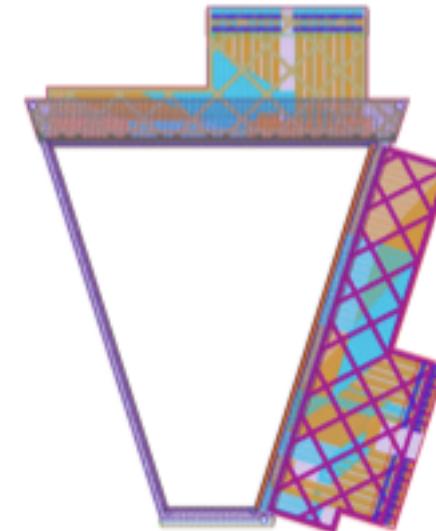

Test-bench for prototypes

- **Digital test bench:**

4X+4Y -- PACI -- WaveCatcher
9X+9Y -- iPACI -- WaveCatcher

→with alpha sourc

- **Analog test bench:**

2 options under study :

- 1) MUFEE (*MUST2*) + MUFI + GANIL DAQ
- 2) COFEE (*MUSSET*) + MUFI + GANIL DAQ

→ 128X+128Y channels with alpha source

- **Captinnov** (A. Torrento)

→ Testbench for point probe measurement for DSSSD

- leakage current per strip
- capacitance per strip
- resistance of the interstrip

!!! may damage the detector

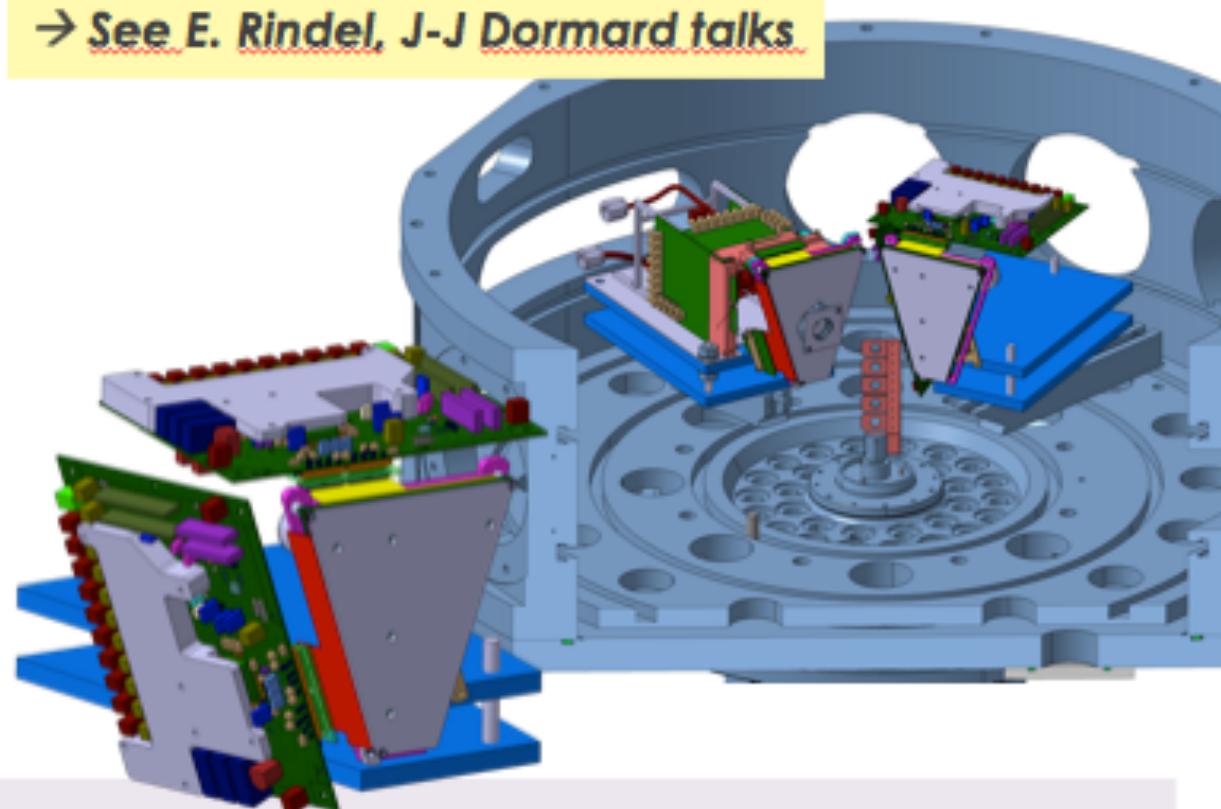

Next experiment @ Tandem (june 2015) : Test of prototypes and electronics

- **Measurement** : $^7\text{Li} + ^{12}\text{C}$ @ 35 MeV(as in previous tests) pulsed beam
- **Set-up :**
 - (a) 40um + Prototype+ PAD : 4X+4Y read by **PACI** (as in previous tests)
 - (b) 40um + Prototype+ PAD : 9X+9Y (long/short strips) read by **iPACI**
acquisition = Wavecatcher (64 channels)

board for iPACI

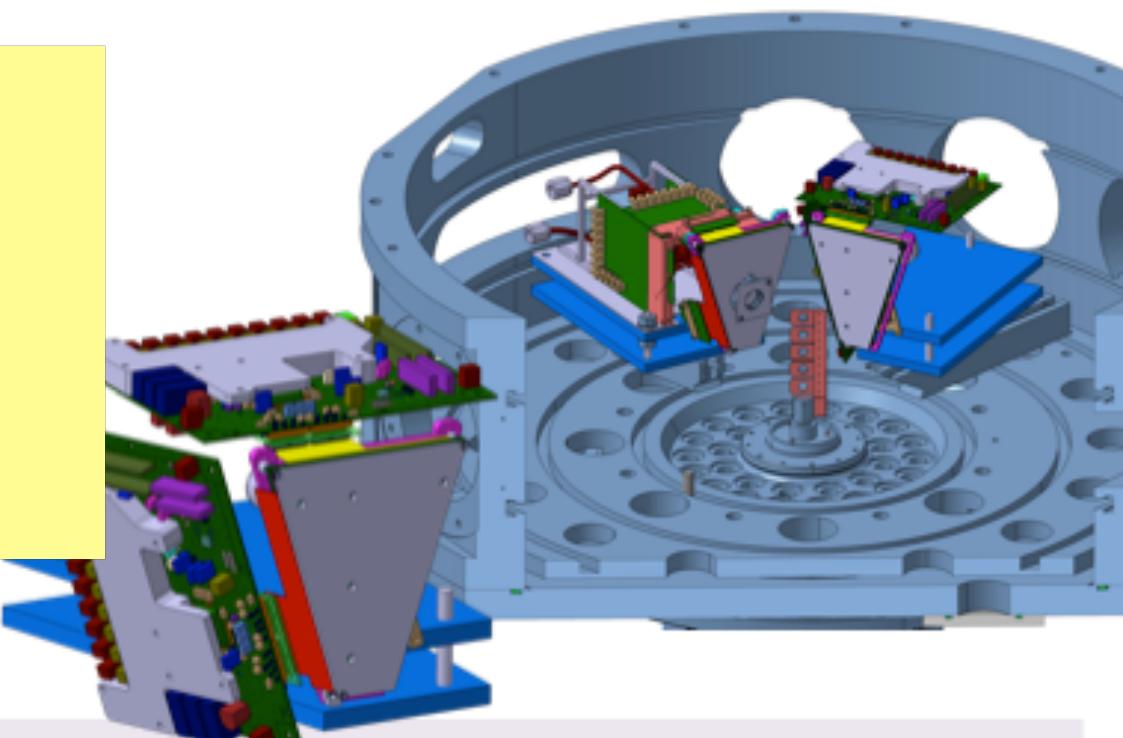

Next experiment @ Tandem (june 2015) : Test of prototypes and electronics

- **Measurement** : $^7\text{Li} + ^{12}\text{C}$ @ 35 MeV (as in previous tests)
 - **Set-up :**
 - (a) 40um + Prototype+ PAD : 4X+4Y read by **PACI** (as in previous tests)
 - (b) 40um + Prototype+ PAD : 9X+9Y (long/short strips) read by **iPACI**
- Acquisition = Wavecatcher (64 channels)

Objectives

- 1) Validate prototypes for trapezoidal shape
- 2) Validate iPACI first run
- 3) Study of PSA for various strips surfaces i.e. capacitances
- 4) New test of peak finder for current signal

Next experiment @ Tandem (june 2015) : Test of prototypes and electronics

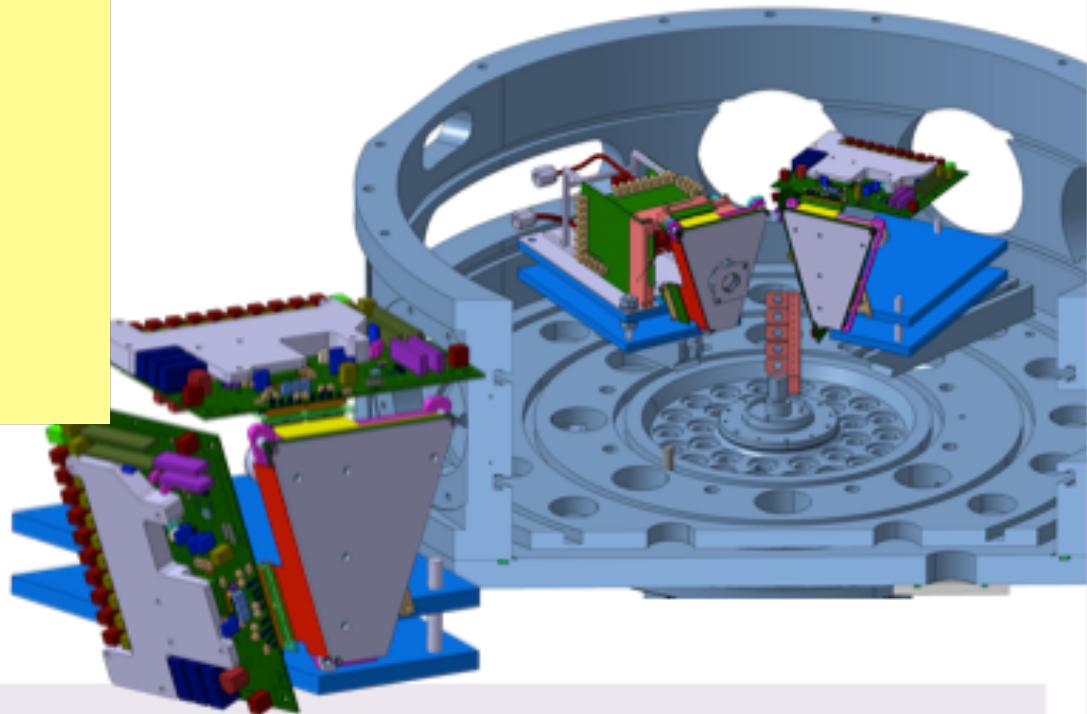

- **Measurement** : $^7\text{Li} + ^{12}\text{C}$ @ 35 MeV (as in previous tests)
 - **Set-up :**
 - (a) 40um + Prototype+ PAD : 4X+4Y read by **PACI** (as in previous tests)
 - (b) 40um + Prototype+ PAD : 9X+9Y (long/short strips) read by **iPACI**
- Acquisition = Wavecatcher (64 channels)

Objectives

- 1) Validate prototypes for trapezoidal shape
- 2) Validate iPACI first run
- 3) Study of PSA for various strips surfaces i.e. capacitances
- 4) New test of peak finder for current signal

Next steps:

radiation damage
measurements

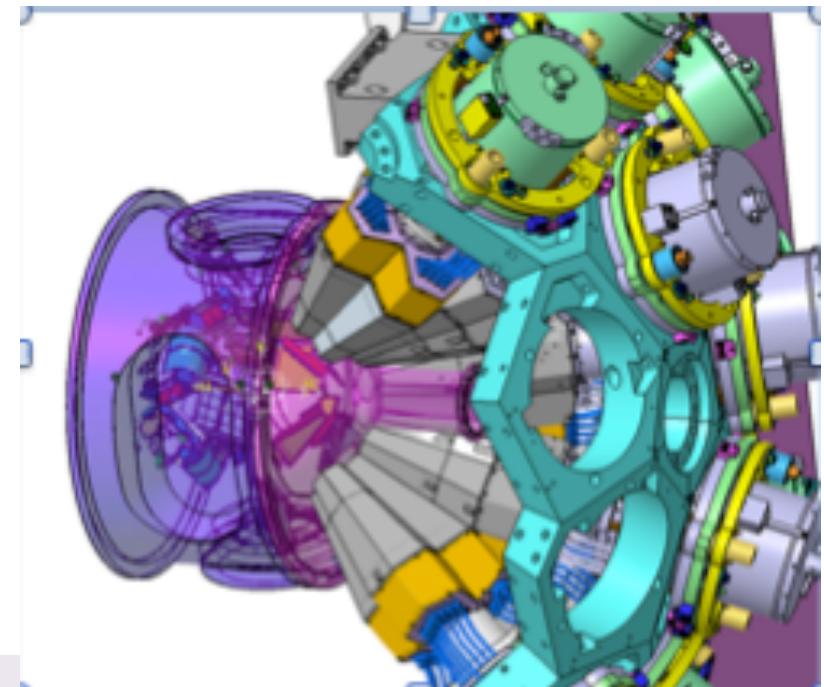

MUGAST configuration ~ end 2017

AGATA campaign on VAMOS @ GANIL until end of 2017, 2018 ?

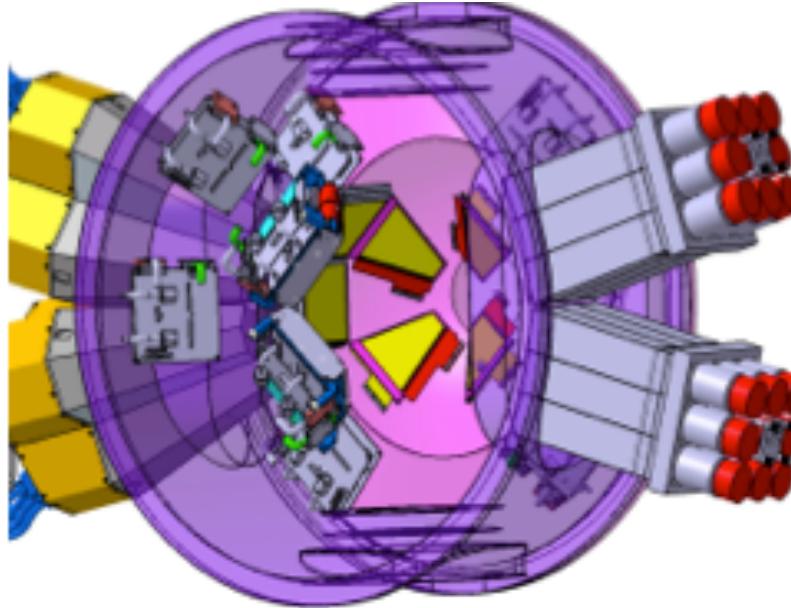

→ LoI for AGATA+MUGAST sent for the next PAC @ GANIL

- . very high energy resolution (5keV)
- . good efficiency (about 5% depending on number of clusters)
- . GASPARD one-layer of Silicon in the backward direction (AGATA side)
(TIARA spirit)

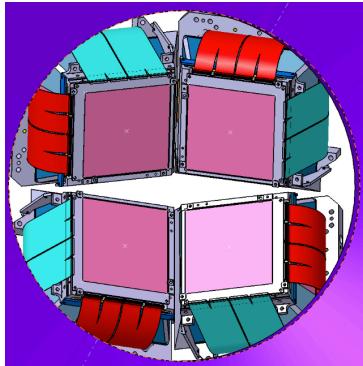

→ well-suited for stripping measurements

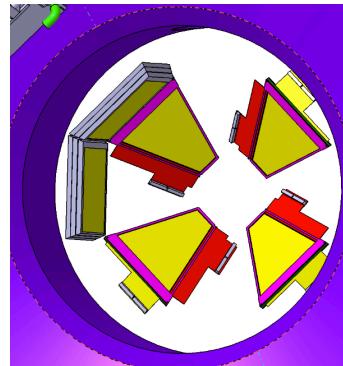

MUGAST configuration ~ end 2017

MUST2
(close config.)

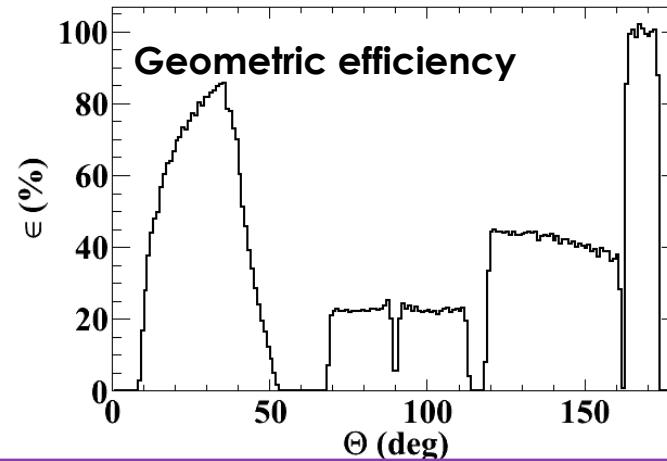

**TRAPEZES (GASPARD)
+CARRES (Trace)**

Detectors

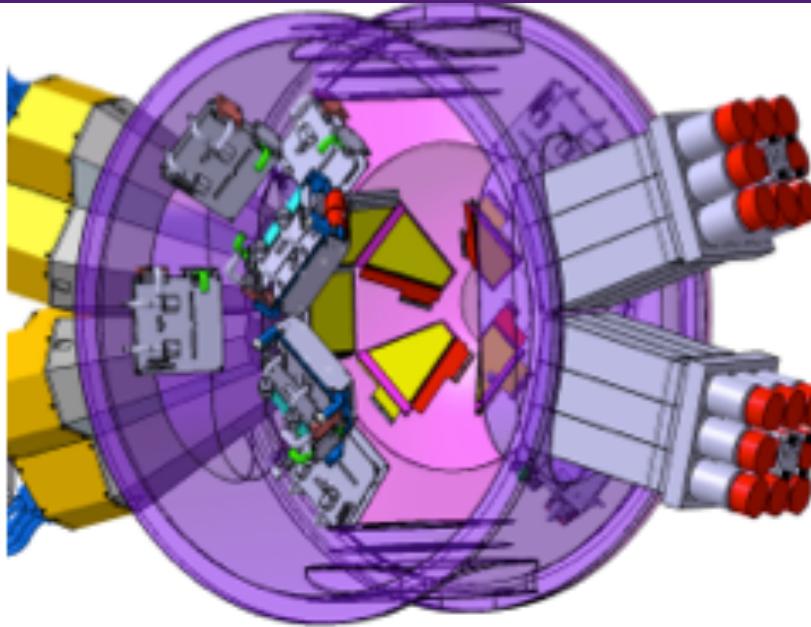

- 4 **MUST2** (forward direction)
- 4 **trapezoid DSSSD 500um** (backward)
- 2 **square DSSSD 500um** (90 deg.)
- **annular detector**

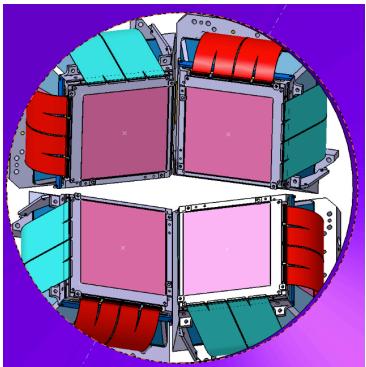

Some examples of LoI

- **Shell Evolution**
 ^{29}Mg (d,p) , ^{27}Na (d,p)
- **Pairing**
 $^{48}\text{Cr}({}^3\text{He},\text{p})$
- **nuclear astrophysics**
 $^{15}\text{O}({}^6\text{Li},\text{d}){}^{19}\text{Ne}$, $^{30}\text{P}(\text{d},\text{p})$,

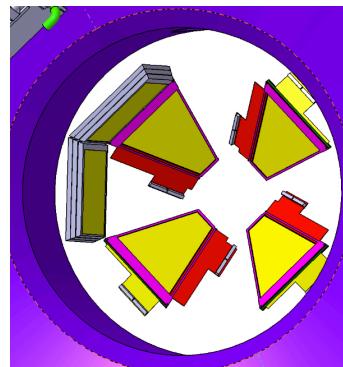

MUGAST configuration

MUST2
(close config.)

**TRAPEZES (GASPARD)
+CARRES (Trace)**

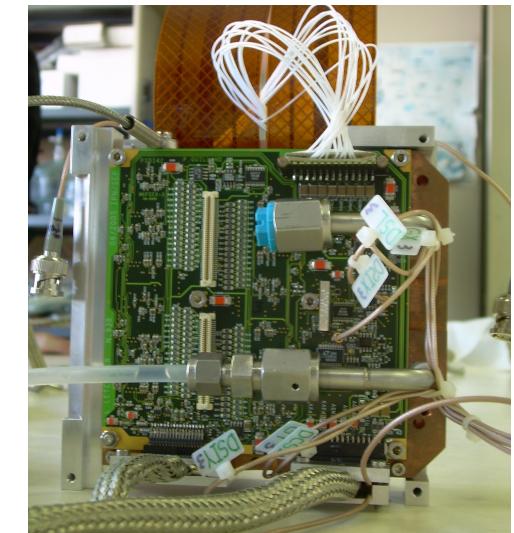

Electronics

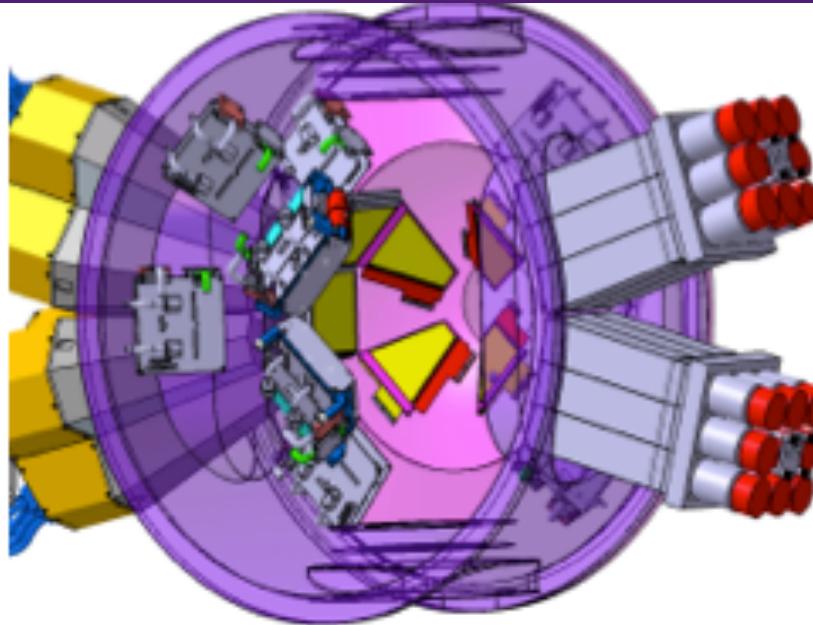

- 4 MUST2 = **MUFEE(2x4) + MUFI(1)**
- 4 trapezoid DSSSD 500um (backward)
- + 2 square DSSSD 500um (90 deg.)
- + annular ?

Option 1:

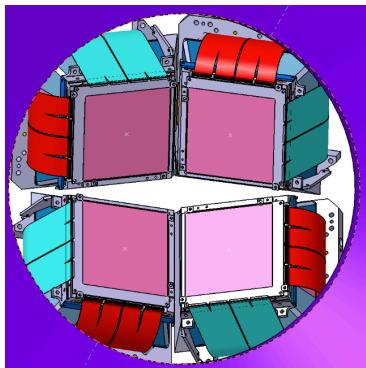

- MUFEE (7x2) + 2 MUFI

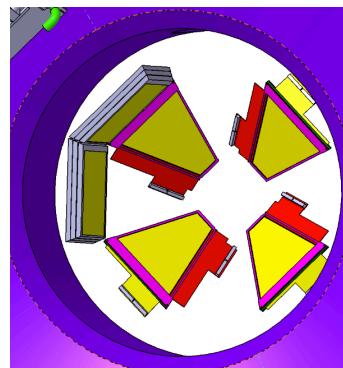

MUGAST configuration

MUST2
(close config.)

TRAPEZES (GASPARD)
+CARRES (Trace)

Electronics

- 4 MUST2 = **MUFEE(2x4) + MUFI(1)**
- 4 trapezoid DSSSD 500um (backward)
+ 2 square DSSSD 500um (90 deg.)
+ annular ?

Option 1:

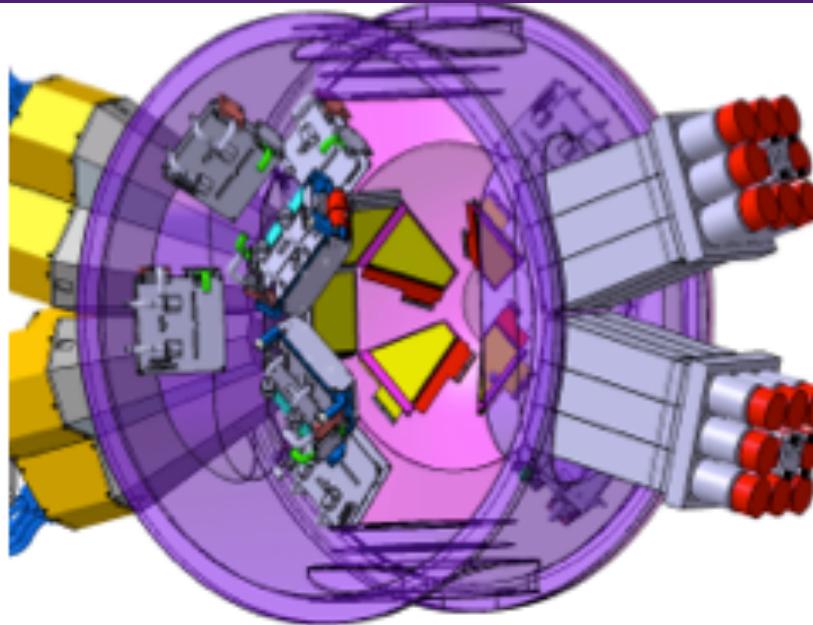

- MUFEE (7x2) + 2 MUFI

Option 2:

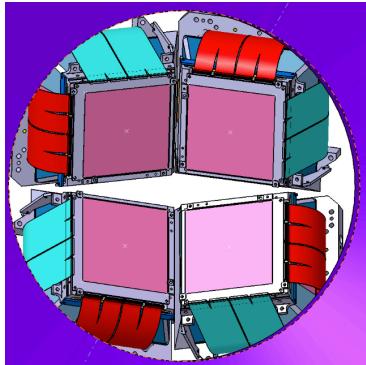

- COFEE (7x2) MUSSET electronics
+ 4 MUFI
+ polarisation circuits (*to be done*)

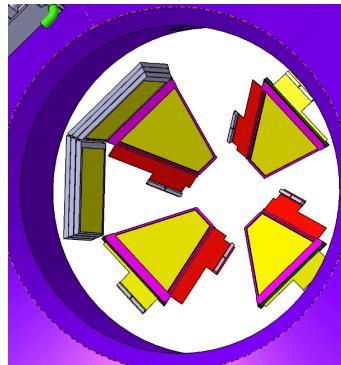

MUGAST configuration

MUST2
(close config.)

TRAPEZES (GASPARD)
+CARRÉS (Trace)

Electronics

- 4 MUST2 = **MUFEE(2x4) + MUFI(1)**
- 4 trapezoid DSSSD 500um (backward)
+ 2 square DSSSD 500um (90 deg.)
+ annular ?

Option 1:

- MUFEE (7x2) + 2 MUFI

Option 2:

- COFEE (7x2) MUSSET electronic
- + 4 MUFI
+ polarisation circuits (*to be done*)

To do :

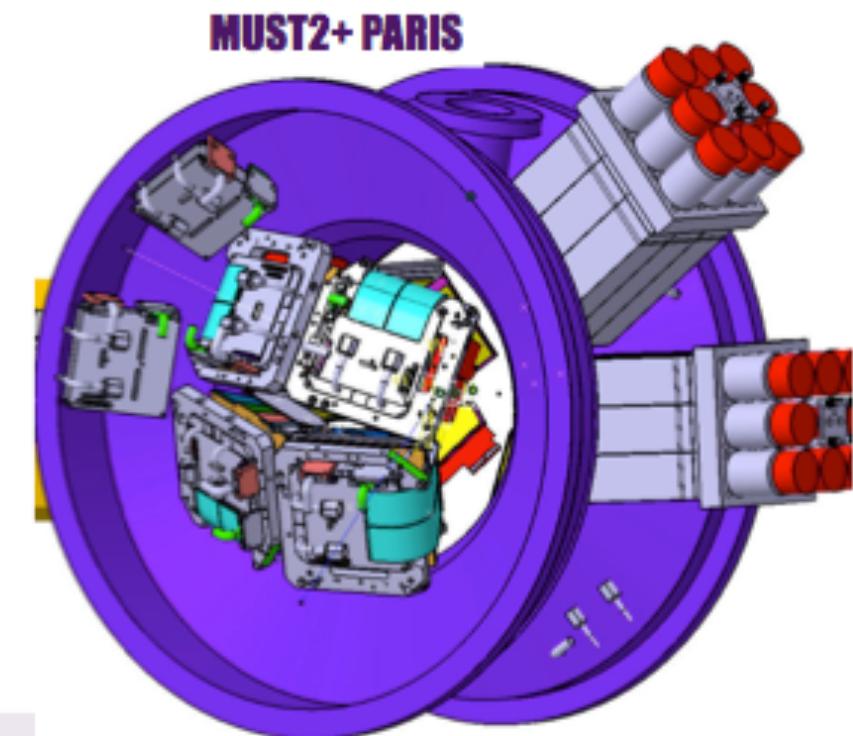

- new kaptons (E. Wanlin)
- new cooling blocs
- reaction chamber (\rightarrow see Ph. Rosier talk)

MUGAST coupled with other detectors (?)

MUGAST & demonstrator phase

« MUGAST » configuration = MUST2 + GASPARD (trapeze) + TRACE (square)
available for AGATA campaign at GANIL (end 2016)
read by **MUST2 electronics (MUFEE+MUVI)**

- **Ancillary detectors :**
 - 6 PARIS clusters (if available)

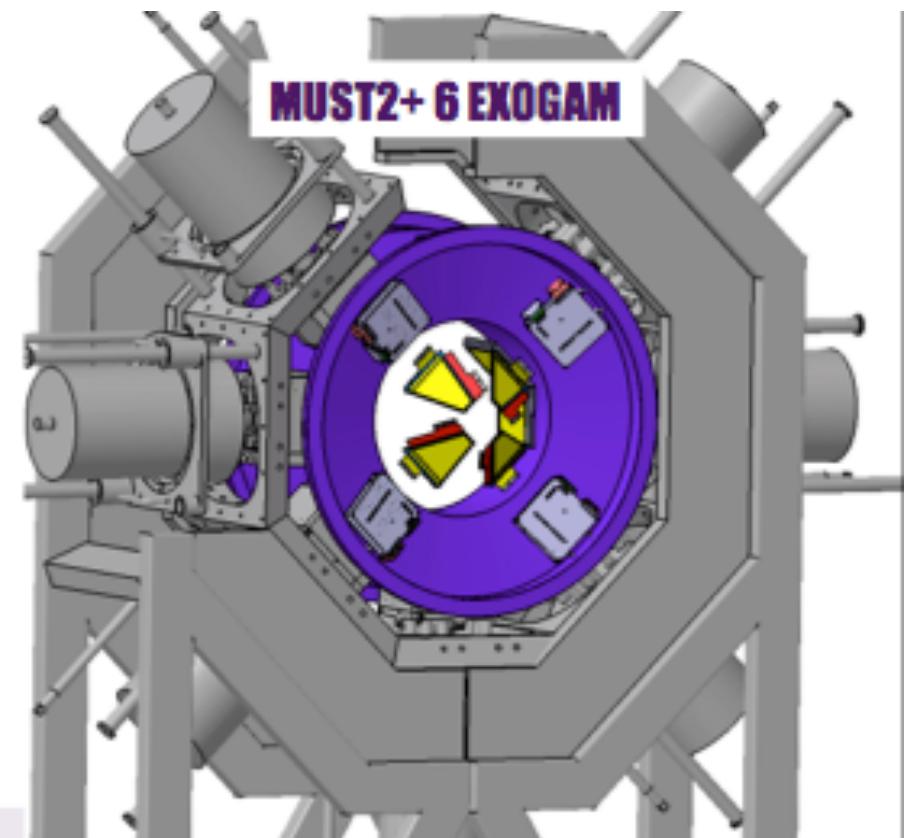

Short and mid-term perspectives

MUGAST & demonstrator phase

« MUGAST » configuration = MUST2 + GASPARD (trapeze) + TRACE (square)
available for AGATA campaign at GANIL (end 2016)
read by **MUST2 electronics (MUFEE+MUVI)**

- **Ancillary detectors :**
 - 6 PARIS clusters (if available)
 - **6 EXOGAM**

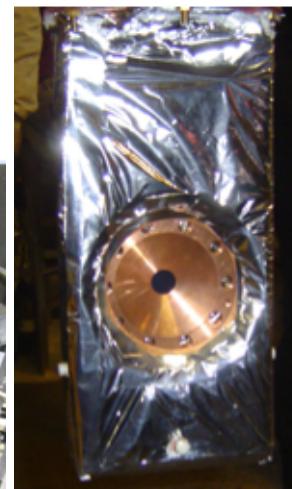

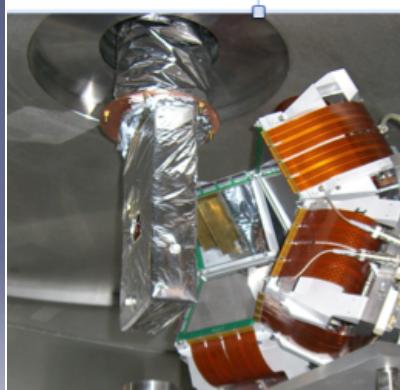

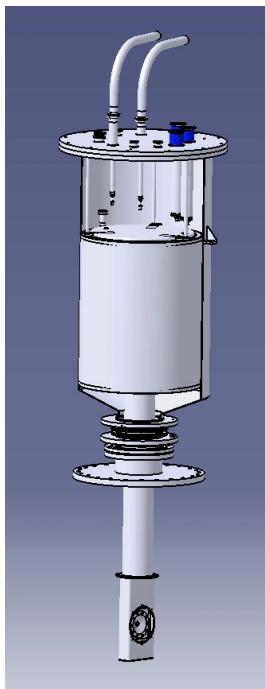

Short and mid-term perspectives
