

## Theory Group scientific activity

*Friday, 8 May 2015 12:15 (45 minutes)*

The main theoretical research activity of INFN is organized in 5 groups.

The research topics concern five main areas:

- i) Astroparticle physics;
- ii) Compact stellar objects and dense hadronic matter;
- iii) Cosmology, large scale structures and dark matter;
- iv) Computer simulations of gauge theories;
- v) Particle physics phenomenology.

We will briefly outline the topics of interest.

**Presenters:** VILLANTE, Francesco Lorenzo (L'Aquila University); PAGLIAROLI, Giulia (LNGS)
