

GdL MISURE DI PRECISIONE SM, BEYOND SM, FLAVOUR

- Naturale sinergia tra fisica **SM**^(*), **BSM**, **Flavour** agli acceleratori: white paper comune
- Sinergia con altre aree, e.g. **Dark Matter**, e **Raggi Cosmici** evidente nel draft
- Capitolo dedicato a **Nuove Tecnologie**

*The content of this incomplete draft is intended for
CSNI internal work and distribution only*

date of this draft: March 16, 2015

Commissione Scientifica Nazionale 1

What Next: White Paper for CSNI

Long term strategy for accelerator based experiments

Draft 220 pagine + 90 di bibliografia e materiale aggiuntivo in editing finale

Editors: G. Isidori
M. Rescigno
R. Tenchini
J. Walsh

Contents

1	Introduction ²	2
2	Present and Future Accelerators ³	5
2.1	Current facilities and planned evolution	5
2.2	Future projects for the energy and intensity frontier	8
2.3	Novel techniques for particle acceleration ⁴	13
2.4	High Field Magnets for post-LHC hadron colliders	16
3	Technological aspects ⁵	17
3.1	Detector technology	17
3.2	Trigger and Data Acquisition	21
3.3	Computing ⁶	23
4	Standard Model Physics ⁷	28
4.1	Higgs Properties and Couplings ⁸	29
4.2	Experimental measurements with W and Z bosons and QCD ⁹	38
4.3	Top quark physics ¹⁰	43
4.4	Status of Monte Carlo generators for high energy colliders ¹¹	51
4.5	Standard Model Physics: Summary and Outlook	54
5	Physics Beyond Standard Model ¹²	57
5.1	Introduction ¹³	58
5.2	Composite Higgs ¹⁴	66
5.3	Supersymmetry ¹⁵	77
5.4	Naturalness-independent scenarios ¹⁶	110
5.5	Collider friendly dark matter ¹⁷	124
5.6	Beyond Standard Model Physics: Summary and Outlook	128
6	Flavour Physics ¹⁸	132
6.1	Introduction ¹⁹	132
6.2	Kaon Physics ²⁰	134

GdL

6.3	Charm physics ²¹	145
6.4	B Physics at hadron colliders ²²	149
6.5	B Physics at e^+e^- colliders ²³	157
6.6	Lepton Flavour Violation ²⁴	160
6.7	Search for the electron EDM in an electrostatic storage ring ²⁵	173
6.8	Extreme Flavour	176
6.9	Flavour Physics: Summary and Outlook	190
7	Hadron Physics and non perturbative QCD ²⁶	193
7.1	Introduction	193
7.2	Confinement and non-perturbative QCD ²⁷	194
7.3	The nucleon structure ²⁸	195
7.4	Hadron spectroscopy ²⁹	200
7.5	Total, elastic and diffractive cross sections ³⁰	205
7.6	Multi-parton interactions ³¹	210
7.7	<u>Cosmic rays and the impact of collider experiments³²</u>	212
7.8	Summary and Outlook	215
8	Conclusions and <i>recommendations</i>	219
8.1	Future new projects	220
A	Standard Model Physics: in-depth analyses and additional contributions	225
A.1	Prospects for a precise W mass measurement at LHC ³³	225
A.2	Effective Field Theories for the Higgs sector ³⁴	231
A.3	Higher order QCD corrections and resummation ³⁵	239
A.4	Monte Carlo tools for electroweak physics ³⁶	246
A.5	The Higgs potential and the Electroweak vacuum ³⁷	250
B	Physics Beyond the Standard Model Physics: in-depth analyses and additional contributions	253
C	Flavour Physics: in-depth analyses and additional contributions	253
C.1	Predicting the accuracy of Flavor Lattice QCD ³⁸	253
