## The Revival of Kaon Flavour Physics

Andrzej J. Buras
(Technical University Munich, TUM-IAS)

## Bari, June 2016

## Overture

## B Physics Anomalies

$$
\begin{aligned}
& \text { 1. } \quad \mathbf{R}_{\mathrm{D}^{(1)}}=\frac{\operatorname{Br}\left(\mathrm{B} \rightarrow \mathrm{D}^{(1)} \tau \nu_{\tau}\right)}{\operatorname{Br}\left(\mathrm{B} \rightarrow \mathrm{D}^{(1)} \mu v_{\mu}\right)} \\
& \text { (3.5-4б) BaBar, LHCb, Belle }
\end{aligned}
$$

$$
\begin{aligned}
& \operatorname{Br}\left(\mathrm{B}_{\mathrm{s}} \rightarrow \mu^{+} \mu^{-}\right)_{\mathrm{SM}}=(3.65 \pm 0.23) \cdot 10^{-9} \\
& \text { CMS +LHCb }\left(2.8_{-0.6}^{+0.7}\right) \cdot 10^{-9} ; \text { ATLAS }\left(0.9_{-0.9}^{+1.1}\right) \cdot 10^{-9}
\end{aligned}
$$

## B Physics Anomalies

## Many papers:

Violation of lepton flavour universality
New flavour violating interactions:
Z', Leptoquarks, Vector-like quarks, General 2HDM, U(2), .. ${ }^{\prime}$, $\mathbf{H}^{+}, \ldots$

But no particular signs of new sources of CP-violation!
Here: Anomaly in CP-violation in K-physics ( $\varepsilon^{\prime} / \varepsilon$ )

$$
\begin{aligned}
& \varepsilon^{\prime}=\mathrm{CP} \text {-violation in Decay }\left(\mathrm{K}_{\mathrm{L}} \rightarrow \pi \pi\right) \\
& \varepsilon=\mathrm{CP} \text {-violation in } \mathrm{K}^{0}-\overline{\mathrm{K}}^{0} \text { Mixing }
\end{aligned}
$$

## Loop Induced FCNC Processes

( $B_{6}$ )

( $\mathrm{B}_{8}$ )

Four dominant contributions to $\varepsilon^{\prime} / \varepsilon$ in the SM
AJB, Jamin, Lautenbacher (1993); AJB, Gorbahn, Jäger, Jamin (2015)

Assumes that $\operatorname{ReA}_{0}$ and $\operatorname{ReA}_{2}$ ( $\Delta I=1 / 2$ Rule) fully described by SM (includes isospin breaking corrections)

$$
\text { Why } B_{6}^{(1 / 2)}<B_{8}^{(3 / 2)}<1 \text { ? }
$$

and not $\quad B_{6}^{(1 / 2)}>1, \quad B_{8}^{(3 / 2)}<1 \quad \begin{gathered}\text { (Pallante, Pich... } \\ \text { 2000) }\end{gathered} \quad$ FSI

## Answer in Large N (Dual QCD) Approach <br> AJB + Gérard (1507.06326)

Before 2015 it was wrongly assumed that

$$
B_{6}^{(1 / 2)}=B_{8}^{(3 / 2)}=1 \text { at } \mu \approx 0(1 \mathrm{GeV})
$$

But $\begin{aligned} B_{6}^{(1 / 2)}=B_{8}^{(3 / 2)}=1 & \text { is large N prediction } \\ & \text { for } \mu=m_{\pi} \text { not } \mu=0(1 \mathrm{GeV})\end{aligned}$
Meson evolution $\mathrm{m}_{\pi} \rightarrow \mu=0(1 \mathrm{GeV})$ suppresses $B_{6}^{(1 / 2)}$ and $B_{8}^{(3 / 2)}$ below 1 and $B_{6}^{(1 / 2)}$ stronger than $B_{8}^{(3 / 2)}$ in accordance with quark evolution for $\mu>1 \mathrm{GeV}$

## FSI in $\mathrm{K} \rightarrow \pi \pi$

AJB, Gérard 1603.05686

## Relevant for $\Delta l=1 / 2$ Rule (in agreement with Pallante, Pich,...) <br> Less important for $\varepsilon^{\prime} / \varepsilon$ (in variance with Pallante, Pich,...)

New application of dual QCD to $\mathrm{K} \rightarrow \pi \mathrm{I}^{+I^{-}}$ (Caluccio-Leskow, D’Ambrosio, Greynat, Nath, 1604.09721)

\end{gathered}
$$

## Section 3

# $\varepsilon^{\prime} / \varepsilon, \varepsilon_{\mathrm{K}}, \mathrm{K} \rightarrow \pi \nu \bar{v}, \Delta \mathrm{M}_{\mathrm{K}}$ <br> <br> beyond SM 

 <br> <br> beyond SM}

## AJB (1601.00005)

What are the implications of NP in $\varepsilon^{\prime} / \varepsilon$ and $\varepsilon_{K}$ on $\mathrm{K} \rightarrow \pi \nu \bar{v}$ and $\Delta \mathbf{M}_{\mathrm{K}}$ ?

## Strategy

AJB (1601.00005)

| $\begin{aligned} & \left(\varepsilon^{\prime} / \varepsilon\right)^{N P}=\kappa_{\varepsilon^{\prime}} \cdot 10^{-3} \\ & 0.5 \leq \kappa_{\varepsilon^{\prime}} \leq 1.5 \end{aligned}$ | $\varepsilon_{\kappa}^{\mathrm{NP}}=\kappa_{\varepsilon} \cdot 10^{-3}$ $0.1 \leq \kappa_{\varepsilon} \leq 0.4$ | In some models $\mathrm{K}_{\mathrm{L}} \rightarrow \mu^{+} \mu^{-}$ more important than $\varepsilon_{k}$ |
| :---: | :---: | :---: |
| (Im) | (Im, Re) |  |
|  |  | $\Delta_{\mathrm{L}}^{\text {sd }}(\mathrm{Z}), \Delta_{\mathrm{R}}^{\text {sd }}(\mathrm{Z})$ |
| Re and Im Parts: $\mathbf{Z}$ and $\mathbf{Z}^{\prime}$ Couplings |  | $\Delta_{L}^{\text {sd }}(\mathbf{Z}), \Delta_{\text {R }}^{\text {sd }}(\mathbf{Z})$ |

$$
\begin{array}{|cccc|}
\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}, \mathrm{~K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}, \mathrm{~K}_{\mathrm{L}} \rightarrow \mu^{+} \mu^{-}, \Delta \mathbf{M}_{\mathrm{K}} \\
(\mathrm{Re}, \mathrm{Im}) & (\mathrm{Im}) & (\mathrm{Re}) & (\mathrm{Im}, \mathrm{Re}) \\
\hline
\end{array}
$$

## Basic Structure of NP Contributions

AJB (1601.00005)

$$
\begin{aligned}
& \left(\varepsilon^{\prime} / \varepsilon\right)^{N P} \rightarrow \operatorname{lm} \quad \varepsilon_{K}^{N P} \rightarrow \operatorname{Im} \cdot \operatorname{Re} \\
& \left(\kappa_{\varepsilon^{\prime}} \geq 0.5\right) \quad\left(\kappa_{\varepsilon} \geq 0.1\right) \\
& \Delta M_{K}^{N P} \sim\left[(\operatorname{Re})^{2}-(\operatorname{lm})^{2}\right]
\end{aligned}
$$

Dominance of $\mathbf{Q}_{6}\left(\mathbf{Q}_{6}^{\prime}\right) \Rightarrow \mathrm{Im} \gg \mathrm{Re} \Rightarrow\left\{\Delta \mathrm{M}_{\mathrm{K}}^{\mathrm{NP}}<\mathbf{0}\right\}$

Dominance of $\mathbf{Q}_{8}\left(\mathbf{Q}_{8}^{\prime}\right) \Rightarrow \operatorname{Re} \gg \mathrm{Im} \Rightarrow\left\{\Delta \mathrm{M}_{\mathrm{K}}^{\mathrm{NP}}>\mathbf{0}\right\}$

Implications for

$$
\begin{array}{r}
\mathbf{R}_{+}^{\bar{v}}=\frac{\operatorname{Br}\left(\mathbf{K}^{+} \rightarrow \pi^{+} v \bar{v}\right)}{\operatorname{Br}\left(\mathbf{K}^{+} \rightarrow \pi^{+} v \bar{v}\right)_{\mathrm{SM}}} \\
(\mathbf{R e}, \mathrm{Im})
\end{array}
$$

$$
\mathbf{R}_{0}^{\mathbf{v}_{0}^{v}=\frac{\operatorname{Br}\left(K_{L} \rightarrow \pi^{0} v \bar{v}\right)}{\operatorname{Br}\left(K_{L} \rightarrow \pi^{0} v \bar{v}\right)_{S M}}} \underset{(\mathrm{Im})}{ }
$$

## Lessons on $\varepsilon^{\prime} / \varepsilon, \varepsilon_{\mathrm{K}}, \mathrm{K} \rightarrow \pi v \overline{\mathrm{v}}$ : BSM

AJB: 1601.00005

## Lesson 1

Do not expect much from MFV (tensions cannot be removed) 1507.08672

We need new source of CP violation!

## Lesson 2

## Tree-Level Z with LH or RH FCNC currents

 (Anticorrelation of $\varepsilon^{\prime} / \varepsilon$ and $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$ ) $\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}$ can be significantly enhanced$$
\begin{array}{|ll|}
\hline \text { LH } & \mathbf{R}_{+}^{v \bar{v}}<2 \\
\text { RH } & \mathbf{R}_{+}^{v \bar{v}}<5.7 \\
\hline
\end{array}
$$

$\mathbf{Q}_{8}$
$\mathbf{Q}_{8}^{\prime}$

Only small effects in $\varepsilon_{K}, \Delta \mathbf{M}_{K}$ allowed because of $K_{L} \rightarrow \mu^{+} \mu^{-}$upper bounds

The following plots from Robert Buras

## Z with LH or RH Flavour Violating Couplings

## Lesson 3

## Tree-Level Z with LH + RH FCNC currents $\varepsilon^{\prime} / \varepsilon, \varepsilon_{\mathrm{K}}, \mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}$ and $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$ can be simultaneously enhanced

## Correlation depends on hierarchy between $\operatorname{Re} \Delta_{L, R}$ and $\operatorname{Im} \Delta_{L, R}$

## Z with LH and RH Flavour Violating Couplings

## Lesson 4

## Correlation between $\varepsilon^{\prime} / \varepsilon, \mathrm{K} \rightarrow \pi v \bar{v}$ in $Z^{\prime}$ scenarios depends on whether QCP Penguin $\left(Q_{6}\right)$ or EWP $\left(Q_{8}\right)$ dominates NP in $\varepsilon^{\prime} / \varepsilon$

## $Z^{\prime}$ Scenarios with LH Couplings $\Delta_{L}^{\text {sd }}\left(Z^{\prime}\right)$

 AJB (1601.00005)Dominance of QCD
Penguins $\left(Q_{6}\right)$ in $\varepsilon^{\prime} / \varepsilon$

Dominance of electroweak Penguins $\left(Q_{8}\right)$ in $\varepsilon^{\prime} / \varepsilon$

Pattern for
$\Delta_{\mathrm{R}}^{\mathrm{qa}}(Z) \approx 0(1)$
in $\varepsilon^{\prime} / \varepsilon$

- Strong correlation between $\mathrm{K}^{+}$and $\mathrm{K}_{\mathrm{L}}$ on the branch parallel to GN bound
- Very large effects in $K_{L}$, moderate in $\mathrm{K}^{+}$
- $\left(\Delta M_{K}\right)^{N P}<0$ (could be 20\%)
- Both enhanced but anticorrelated

$$
\begin{array}{lll}
\mathbf{K}_{\mathbf{L}} \Uparrow & \mathbf{K}^{+} \Downarrow \text { with } \mathbf{K}_{\varepsilon^{\prime}} \Uparrow \\
& \left(\mathbf{K}^{+} \Uparrow \text { with } \mathbf{K}_{\varepsilon} \Uparrow\right) \quad \text { Only }(20-40) \% \text { effects }
\end{array}
$$

- $\left(\Delta M_{K}\right)^{N P}>0$ (below 10\%)

$$
\mathbf{M}_{\mathbf{z}}=\mathbf{3} \mathbf{~ T e V}
$$

$\operatorname{QCDP}\left(\mathbf{Q}_{6}\right)$

EWP $\left(Q_{8}\right)$

( $R_{\Delta M}^{z}>0$ but small)
(Z)

## Section 4

1404.3824,... 1311.6729

Simplified NP Models 1507.08672

LHT
1507.0631

## Most Recent

331 models facing $\Delta \mathbf{M}_{\mathrm{s}, \mathrm{d}} \leftrightarrow \varepsilon_{\mathrm{K}}$ tension
$\varepsilon^{\prime} / \varepsilon, B_{s} \rightarrow \mu^{+} \mu^{-}$,
$B \rightarrow K^{*} \mu^{+} \mu^{-}$

## Model with Vektor-like Quarks

# 331 Models Facing $\varepsilon$ '/ $\varepsilon$ Anomaly 

AJB, De Fazio 1512.02869, 1604.02344

1. $\kappa_{\varepsilon^{\prime}} \leq 0.6$ (only 3 models can reach upper bound)

None of them can explain suppressions of $C_{9}\left(B \rightarrow K\left(K^{*}\right) \mu^{+} \mu^{-}\right)$and $B_{s} \rightarrow \mu^{+} \mu^{-}$ simultaneously. None $R_{K}$

Small NP effects in $\mathrm{K}^{+} \rightarrow \pi^{+} \nu \bar{v}$ and $K_{L} \rightarrow \pi^{0} v \bar{v}$

## Correlations in Favorite 331 Models

(AJB+De Fazio, 1604.02344)

## Open Questions to be answered hopefully in this Decade

1. 

What is $\operatorname{Br}\left(\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}\right)$ from NA62?
What is $\operatorname{Br}\left(\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}\right)$ from KOTO?
What is the value of $\kappa_{\varepsilon^{\prime}}$ ? (Lattice, CKM, NNLO)
What is the value of $\kappa_{\varepsilon}$ ? (CKM, $\eta_{1}$ )
What is $\left(\Delta M_{K}\right)^{s M} ? \quad$ (Lattice)
Does NP contribute to ReA ${ }_{0}$ at 10-20\% level? (Lattice) (see AJB, De Fazio, Girrbach: 1404.3824)
7.

Do $\mathbf{Z}^{\prime}, \mathbf{G}^{\prime}$ or other new particles exist? 750 GeV !?

## Exciting Times are just ahead of us !!!

## Exciting Times are just ahead of us !!!

## Thank You!

## Anomalies in Kaon Flavour Physics

## Backup

## $\varepsilon^{\prime} / \varepsilon$ within SM

$\varepsilon^{\prime} / \varepsilon \sim\left[\frac{\operatorname{ReA}_{2}}{\operatorname{ReA}_{0}} \operatorname{ImC}_{6}\left\langle\mathbf{Q}_{6}\right\rangle_{0}-\operatorname{ImC}_{8}\left\langle\mathbf{Q}_{8}\right\rangle_{2}+\right.$ smaller contributions $]$
$\left\{\begin{array}{lll}\frac{\mathrm{ReA}_{2}}{\operatorname{Re} A_{0}} \approx \frac{1}{22} & \frac{\mathrm{ImC}_{6}}{\mathrm{ImC}_{8}} \approx 90 & \frac{\left\langle\mathrm{Q}_{8}\right\rangle_{2}}{\left\langle\mathrm{Q}_{6}\right\rangle_{0}} \approx 2\end{array}\right\} \Rightarrow$ strong $_{\text {cancellations }}$

## $\varepsilon^{\prime} / \varepsilon$ beyond $S M\left(Q_{6}, Q_{8}, Q_{6}^{\prime}, Q_{8}^{\prime}\right)$

1. Generally $Q_{8}$ wins over $Q_{6}$ because $\left(\frac{\mathrm{ImC}_{6}}{\mathrm{ImC}_{8}}\right)^{\mathrm{NP}} \approx 0(1)$
$Q_{6}$ wins over $Q_{8}$ in the presence of a flavour symmetry forbidding $Q_{8}$
2. Chromomagnetic operators (not in this talk)

## QCD Penguin $\left(Q_{6}\right)$

Electroweak Penguin $\left(\mathbf{Q}_{8}\right)$
(Z)

## LHT : Blanke, AJB, Recksiegel (1507.06316)

$$
\begin{array}{ll}
\left(\mathrm{B}_{6}^{(1) 25}\right) \\
\left(\mathrm{B}_{6}^{(1 / 2)}=1.0, \quad \mathrm{~B}_{8}^{(3 / 2)}=1.0\right) & \text { Large } \mathrm{N} \text { bound) } \\
\left(\mathrm{B}_{6}^{(1 / 2)}=0.75, \quad \mathrm{~B}_{8}^{(3 / 2)}=0.76\right) \\
\left(\mathrm{B}_{6}^{(1 / 2)}=0.57, \quad \mathrm{~B}_{8}^{(3 / 2)}=0.76\right)
\end{array}
$$

## Supersymmetric Explanation of $\varepsilon^{\prime} / \varepsilon$ and $\varepsilon_{K}$

Teppei Kitahara

Ulrich Nierste

$\varepsilon^{\prime} / \varepsilon$ anomaly can be explained in the MSSM with squark masses above 3 TeV being consistent with $\varepsilon_{\mathrm{K}}$ without finetuning of CP phases or other parameters.

## 2018 Vision

$$
\operatorname{Br}\left(\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}\right)=(18.0 \pm 2.0) \cdot 10^{-11}
$$

$$
\kappa_{\varepsilon^{\prime}} \approx 1.0
$$

Would point : $\quad \mathbf{Z}$ with LH + RH couplings towards

$$
\begin{aligned}
& Z^{\prime}(\text { QCDP }) \text { with } Z^{\prime} q \bar{q} \approx 0(1) \\
& Z^{\prime}(\text { EWP }) \text { with } Z^{\prime} q \bar{q} \approx 10^{-2}
\end{aligned}
$$

$\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}$ and $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$ in MFV and $\mathrm{U}(2)^{3}$
AJB + Fleischer (MFV)
Modified Z : Constrained MFV

AJB, Buttazzo, Knegjens: hep-ph-1507.08672

## New Physics Explanations of Anomalies

## Andreas Crivellin, 1605.02934

# Can we reach Zeptouniverse through Quark Flavour Physics? 

AJB, Buttazzo, Girrbach-Noe, Knegjens, 1407.0728

If only left-handed or only right-handed couplings present in NP

If both LH and RH present but $\mathrm{g}_{\mathrm{L}}^{\mathrm{i}} \ll \mathrm{g}_{\mathrm{R}}^{\mathrm{ij}}$ or $\mathrm{g}_{\mathrm{L}}^{\mathrm{i}} \gg \mathrm{g}_{\mathrm{R}}^{\mathrm{ij}}$

Only with K rare Decays $B_{s} \sim 15 \mathrm{TeV}, B_{d} \sim 15 \mathrm{TeV}$
$\mathrm{K} \rightarrow \pi \overline{\mathrm{v}}: \Lambda_{\mathrm{NP}}^{\max } \simeq 2000 \mathrm{TeV}$
$B_{\mathrm{d}} \quad: \Lambda_{\mathrm{NP}}^{\max } \simeq 160 \mathrm{TeV}$
$B_{\text {s }} \quad: \Lambda_{\mathrm{NP}}^{\max } \simeq \mathbf{1 6 0} \mathbf{~ T e V}$

Yes we can !!

## Heavy Z' at Work

AJB, Buttazzo, Girrbach-Noe, Knegjens, 1407.0728

## $\varepsilon_{\mathrm{K}}$ constraint

General discussion: Blanke 0904.2528

No $\varepsilon_{K}$ constraint

# Can we reach Zeptouniverse through S and P 

AJB, Buttazzo, Girrbach-Noe, Knegjens, 1407.0728

$$
\begin{aligned}
& \mathrm{S}: \approx 350 \mathrm{TeV} \\
& \mathrm{P}: \approx 700 \mathrm{TeV}
\end{aligned}
$$

Pseudoscalars more powerful than scalars because of the interference with SM contribution

Similar to $\mathbf{K} \rightarrow \pi v \bar{v}(\mathbf{Z})$ : No tuning neccessary to reach Zeptouniverse

$$
S=H^{\circ} \quad P=A^{\circ}
$$

## RBC-UK QCD

$$
\varepsilon^{\prime} / \varepsilon=(1.4 \pm 7.0) \cdot 10^{-4}
$$

$$
\left(\frac{\operatorname{Re} A_{0}}{\operatorname{Re} A_{2}}\right)=31.0 \pm 6.6
$$

$$
\left(\varepsilon^{\prime} / \varepsilon\right)_{\mathrm{exp}}=(16.6 \pm 2.3) \cdot 10^{-4}
$$

$$
\left(\frac{\operatorname{Re} A_{0}}{\operatorname{Re} A_{2}}\right)_{\text {exp }}=22.4
$$

## Large $\mathbf{N}$

$$
\left(\varepsilon^{\prime} / \varepsilon\right)<(8.6 \pm 3.2) \cdot 10^{-4}
$$

$$
\left(\frac{\operatorname{Re} A_{0}}{\operatorname{Re} A_{2}}\right)=16.0 \pm 1.5
$$

Bardeen

## Motivations for New Analysis

NA62 in progress: 10\% measurement of

$$
\mathbf{K}^{+} \rightarrow \pi^{+} \nu \bar{v} \text { in } 2018 .
$$

Stress CKM uncertainties in
$\operatorname{Br}\left(\mathbf{K}^{+} \rightarrow \pi^{+} v \bar{v}\right), \operatorname{Br}\left(\mathbf{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}\right)$
Point out correlation between

$$
\begin{array}{|lll}
\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}, & \mathbf{B}_{\mathrm{s}} \rightarrow \mu^{+} \mu^{-} & \text {and } \gamma \\
\hline \text { (NA62) } & \text { (LHCb+CMS) } & \text { (LHCb) }
\end{array}
$$

## Basically no CKM uncertainties

Update correlation between
$\mathrm{K}^{+} \rightarrow \pi^{+} v \overline{\mathrm{v}}, \mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \overline{\mathrm{v}}$ and $\beta$
(Buchalla, AJB, 94)
(AJB, Fleischer, 00)
Use most recent lattice input for CKM
Provide the present best value in SM

## $\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}$ and $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$ in simplified NP Models

Review Mod. Phys.: AJB, Schwab, Uhlig (2008) (0405132) AJB, Buttazzo, Knegjens: hep-ph-1507.08672

MFV
$\mathbf{2 0 - 3 0 \%}$ effects, strong correlation between $\mathrm{K}^{+}$and $\mathrm{K}_{\mathrm{L}}(\mathrm{Z}, \mathrm{Z})$
$\mathbf{U}(2)^{3}$ :
No MFV :
Correlation depends on the presence or absence of $\varepsilon_{\mathrm{K}}$ constraint, size on $\varepsilon^{\prime} / \varepsilon, \mathrm{K}_{\mathrm{L}} \rightarrow \mu^{+} \mu^{-}$

FCNCs Z :

FCNCs Z' :
Still larger enhancements possible as $\varepsilon^{\prime} / \varepsilon$ constraint can be eliminated in a model independent analysis but not in specific models with known flavour diagonal quark couplings.

More info in BBK
see Rob Knegjens (Moriond) 1505.04928
Enhancements by factors 2-3 over SM still possible ( $\varepsilon^{\prime} / \varepsilon$ constraint important)

## Different Patterns of Flavour Violation

## $Z$ with LH couplings: $\Delta_{L}^{\text {sd }}(Z)$

$\mathrm{Q}_{8}$ EWP
AJB (1601.00005)

- Anticorrelation of $\varepsilon^{\prime} / \varepsilon$ and $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$
- Strong suppression of $\operatorname{Br}\left(K_{L} \rightarrow \pi^{0} v \bar{v}\right)$
- $\operatorname{Br}\left(\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}\right) \leq 2 \operatorname{Br}\left(\mathrm{~K}^{+} \rightarrow \pi^{+} v \bar{v}\right)^{\mathrm{sM}}$ $\int \begin{aligned} & \text { No specific } \\ & \text { correlation }\end{aligned}$
- NP effects in $\Delta \mathbf{M}_{K}$ and $\varepsilon_{K}$ very small $\quad\left(K_{L} \rightarrow \mu^{+} \mu^{-}\right.$constraint
$Z$ with RH couplings: $\Delta_{R}^{\text {sd }}(\mathbf{Z})$
- Anticorrelation of $\varepsilon^{\prime} / \varepsilon$ and $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$
- Moderate suppression of $\operatorname{Br}\left(\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}\right)$
- $\operatorname{Br}\left(\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}\right) \leq 6 \operatorname{Br}\left(\mathrm{~K}^{+} \rightarrow \pi^{+} v \bar{v}\right)^{\text {SM }}$
- NP effects in $\Delta \mathbf{M}_{\mathrm{K}}$ and $\varepsilon_{\mathrm{K}}$ very small

Unless
Loop effects important
$\mathbf{Q}_{8}$. EWP

## $Z$ with LH and RH Couplings $\Delta_{L, R}^{\text {sd }}(Z)$

AJB (1601.00005)

## New Features

$\varepsilon_{\mathrm{K}}$ constraint dominates over $\mathrm{K}_{\mathrm{L}} \rightarrow \mu^{+} \mu^{-}$ because of LR operators $\rightarrow$ " $\varepsilon_{\mathrm{K}}$ anomaly" can be resolved.
Possibility of simultaneous enhancements of

$$
\varepsilon^{\prime} / \varepsilon, \varepsilon_{\mathrm{K}}, \mathrm{~K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}, \mathrm{~K}^{+} \rightarrow \pi^{+} v \overline{\mathrm{v}}
$$

Example 1

$$
\operatorname{Im} \Delta_{\mathrm{L}, \mathrm{R}}<\operatorname{Re} \Delta_{\mathrm{L}, \mathrm{R}}
$$

Example 2
$\operatorname{Im} \Delta_{\mathrm{L}, \mathrm{R}} \gg \operatorname{Re} \Delta_{\mathrm{L}, \mathrm{R}}$

Both $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$ and $\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}$ enhanced but anticorrelated

$$
\mathbf{K}_{\mathrm{L}} \Uparrow \mathbf{K}^{+} \Downarrow \text { with } \mathbf{K}_{\varepsilon^{-}} \Uparrow
$$

$$
\left(K^{+} \Uparrow \text { with } \kappa_{\varepsilon} \Uparrow\right)
$$

$\mathbf{K}_{\mathrm{L}} \Uparrow \mathbf{K}^{+} \Uparrow$ with $\mathbf{K}_{\varepsilon^{-}} \Uparrow$

NP Effects in $\Delta \mathbf{M}_{K}$ small
(no depencence on $\kappa_{\varepsilon}$ )
Correlation between $\mathrm{K}_{\mathrm{L}}$ and $\mathrm{K}^{+}$ On the branch parallel to Grossmann-Nir Bound

## What about $\Delta I=1 / 2$ Rule?

## $\operatorname{Re} \mathrm{A}_{0}$ $\operatorname{ReA}_{2}$ <br> $\approx 22.4$

Gell-Mann Pais

1986, 2014

Large $\mathbf{N}$ including I/N corredtions

Quark Evolution $1 \mathrm{GeV} \leq \mu \leq \mathrm{M}_{\mathrm{w}}$
: Meson Evolution $0 \leq \mu \leq 1 \mathrm{GeV}$
$\begin{aligned} & \mathrm{C}_{\text {Correct value }}^{\text {of } \operatorname{ReA}_{2}}\end{aligned}\left(\frac{\operatorname{Re} A_{0}}{\operatorname{Re} A_{2}}\right)_{\mathrm{IV}} \approx 16.0 \pm 1.5$
Correct value of $\mathrm{ReA}_{2}$
$\approx 31 \pm 7$
${\operatorname{Re~} A_{2}}_{)_{\text {Lattice }}} \approx 31 \pm 7$

Dominance of currentcurrent operators

AJB
De Fazio
Girrbach-Noe 1404.3824

## $Z$ with FCNCs at Work

Bf)

LRS

AJB, de Fazio, Girrbach-Noe 1404.3824

## 2 Tensions in $\Delta F=2$ within MFV

## $\varepsilon_{\mathrm{K}} \leftrightarrow \Delta \mathrm{M}_{\mathrm{s}, \mathrm{d}}$

$$
\varepsilon_{K} \leftrightarrow S_{\psi K_{s}}
$$

AJB + Girrbach 1306.3755
Similar tension in
Gauged Flavour Models:
AJB, Merlo, Stamou (2011)
*) Can still work within MFV ( $\Delta \varepsilon_{K}>0$ in MFV) Blanke + AJB (2006)

Both tensions can only be clarified through improved $\left|\mathbf{V}_{\mathrm{ub}}\right|,\left|\mathbf{V}_{\mathrm{cb}}\right|+$ Lattice Input and improved measurement of $S_{\psi K_{s}}$

## Correlations within SM

$$
\mathbf{B}_{\mathrm{s}} \rightarrow \mu^{+} \mu^{-}, \mathbf{K}^{+} \rightarrow \pi^{+} v \bar{v}, \gamma
$$

BBGK (2015)

$\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}, \mathrm{~K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}, \boldsymbol{\beta}$
Buchalla, AJB (94)

## General Properties

$$
\mathbf{K}^{+} \rightarrow \pi^{+} v \bar{v}
$$

CP-conserving
$\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{\circ} v \bar{v} \quad$ CP-violating
Both sensitive to New Physics (NP)
$\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v} \quad$ bounded by $\mathrm{K}_{\mathrm{L}} \rightarrow \mu^{+} \mu^{-}$
$\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v} \quad$ bounded by $\varepsilon^{\prime} / \varepsilon$
The correlation between $\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}$ and $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$ depends on the $\varepsilon_{\mathrm{K}}$ constraint (Blanke 0904.2528)

Can probe scales far above LHC.

## Strategy B: use $\varepsilon_{K}, \Delta M_{s}, \Delta M_{d}, S_{\psi K}$

$$
\left|V_{\mathrm{cb}}\right|=(42.4 \pm 1.0) \cdot 10^{-3} \quad\left|V_{\mathrm{ub}}\right|=(\mathbf{3 . 6 1} \pm 0.13) \cdot 10^{-3}
$$

$$
\gamma=(69.5 \pm 5.0)^{\circ} \Rightarrow \underset{\text { (after new lattice results for } \xi \text { ) }}{\gamma=(70.8 \pm 2.3)^{\circ}}
$$

$$
\begin{aligned}
& \operatorname{Br}\left(\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}\right)=(9.1 \pm 0.7) \cdot 10^{-11} \\
& \operatorname{Br}\left(\mathrm{~K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}\right)=(3.0 \pm 0.3) \cdot 10^{-11}
\end{aligned}
$$

UTfit : $\left|\mathbf{V}_{\text {cb }}\right|=(41.7 \pm 0.6) \cdot 10^{-3}$
CKMfitter : $\left|\mathbf{V}_{\text {cb }}\right|=(41.2 \pm 1.0) \cdot 10^{-3}$
$\left|V_{\mathrm{ub}}\right|=(3.63 \pm 0.12) \cdot 10^{-3}$
$\left|V_{\mathrm{ub}}\right|=(3.55 \pm 0.16) \cdot 10^{-3}$

# New Bound on $\mathrm{B}_{6}^{(1 / 2)}$ and $\mathrm{B}_{8}^{(3 / 2)}$ from Large $\mathbf{N}$ 

AJB + Gérard 1507.06326

$$
\mathbf{B}_{6}^{(1 / 2)} \leq \mathbf{B}_{8}^{(3 / 2)}<1 \quad \square \quad \text { Using BGJJ formula }
$$

$$
\begin{array}{llll}
B_{6}^{(1 / 2)}=1.0 & B_{8}^{(3 / 2)}=1.0 & \Rightarrow & \left(\varepsilon^{\prime} / \varepsilon\right)_{S M}=8.6 \cdot 10^{-4} \\
B_{6}^{(1 / 2)}=0.8 & B_{8}^{(3 / 2)}=0.8 & \Rightarrow & \left(\varepsilon^{\prime} / \varepsilon\right)_{S M}=6.4 \cdot 10^{-4} \\
B_{6}^{(1 / 2)}=0.6 & B_{8}^{(3 / 2)}=0.8 & \Rightarrow & \left(\varepsilon^{\prime} / \varepsilon\right)_{S M}=2.2 \cdot 10^{-4}
\end{array}
$$

For $\operatorname{Im}\left(\mathbf{V}_{\mathbf{t s}} \mathbf{V}_{\mathrm{td}}^{*}\right)=1.4 \cdot 10^{-4}$
Below data but positive
Yet still large uncertainties

## $\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}$ versus $\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}$

AJB, Buttazzo, Knegjens, 1507.08672

## Error Budgets

Update: 1503.02693

$$
P_{c}=0.404 \pm 0.024
$$

$$
x_{t}=1.481 \pm 0.005_{t h} \pm 0.008_{\text {exp }}
$$

## $Z^{\prime}$ outside the reach of the LHC

## QCD Penguin

For fixed $\kappa_{\varepsilon^{\prime}}$ :
But constraint
$\operatorname{Br}\left(\mathrm{K}_{\mathrm{L}} \rightarrow \pi^{0} v \bar{v}\right), \operatorname{Br}\left(\mathrm{K}^{+} \rightarrow \pi^{+} v \bar{v}\right)$
Independent of $\mathbf{M}_{\mathbf{Z}}$ from $\Delta \mathbf{M}_{\mathrm{K}}$

$Z^{\prime} q^{\prime} \bar{q} \approx 0(1)$

$$
\overline{\mathbf{\kappa}}_{\varepsilon^{\prime}} \equiv\left[\frac{\boldsymbol{\kappa}_{\varepsilon^{\prime}}}{\left.\Delta_{\mathbf{R}}^{\rho \bar{\rho}} \mathbf{Z}^{\prime}\right)}\right]
$$

EWP Penguin : Significant effects in rare decays only for

$$
q \bar{q} Z^{\prime} \approx 0\left(10^{-2}\right)
$$

## Using Tree Level Determination of CKM

$$
\begin{aligned}
& \left|V_{\text {ub }}\right|_{\text {excl }}=(\mathbf{3 . 7 2} \pm 0.14) \cdot 10^{-3} \quad\left|V_{\text {cb }}\right|_{\text {excl }}=(\mathbf{3 9 . 3 6} \pm 0.75) \cdot 10^{-3} \\
& V_{\mathrm{ub}}^{\text {lincl }}=(\mathbf{4 . 4 0} \pm \mathbf{0 . 2 5}) \cdot 10^{-3} \quad\left|V_{\mathrm{cb}}\right|_{\text {lincl }}=(\mathbf{4 2 . 2 1} \pm 0.78) \cdot 10^{-3}
\end{aligned}
$$

$$
\left.V_{\mathrm{ub}}\right|_{\text {avg }}=(3.88 \pm 0.29) \cdot 10^{-3} \quad\left|V_{\mathrm{cb}}\right|_{\text {avg }}=(40.7 \pm 1.4) \cdot 10^{-3}
$$

$$
\begin{aligned}
