## Progress

### The main 2013-14 LHC consolidations

Opening complete  
the interconnection

#### CERN's accelerator complex schedule:

2 June 2014: restart of the Booster

18 June 2014: restart of the Proton Synchrotron (PS)

Early July: powering tests at the Super Proton Synchrotron (SPS)

Mid- July: Physics programme to restart at the Isolde facility and at the PS

Mid-August: Antimatter Physics programme to restart at the Antiproton Decelerator (AD)

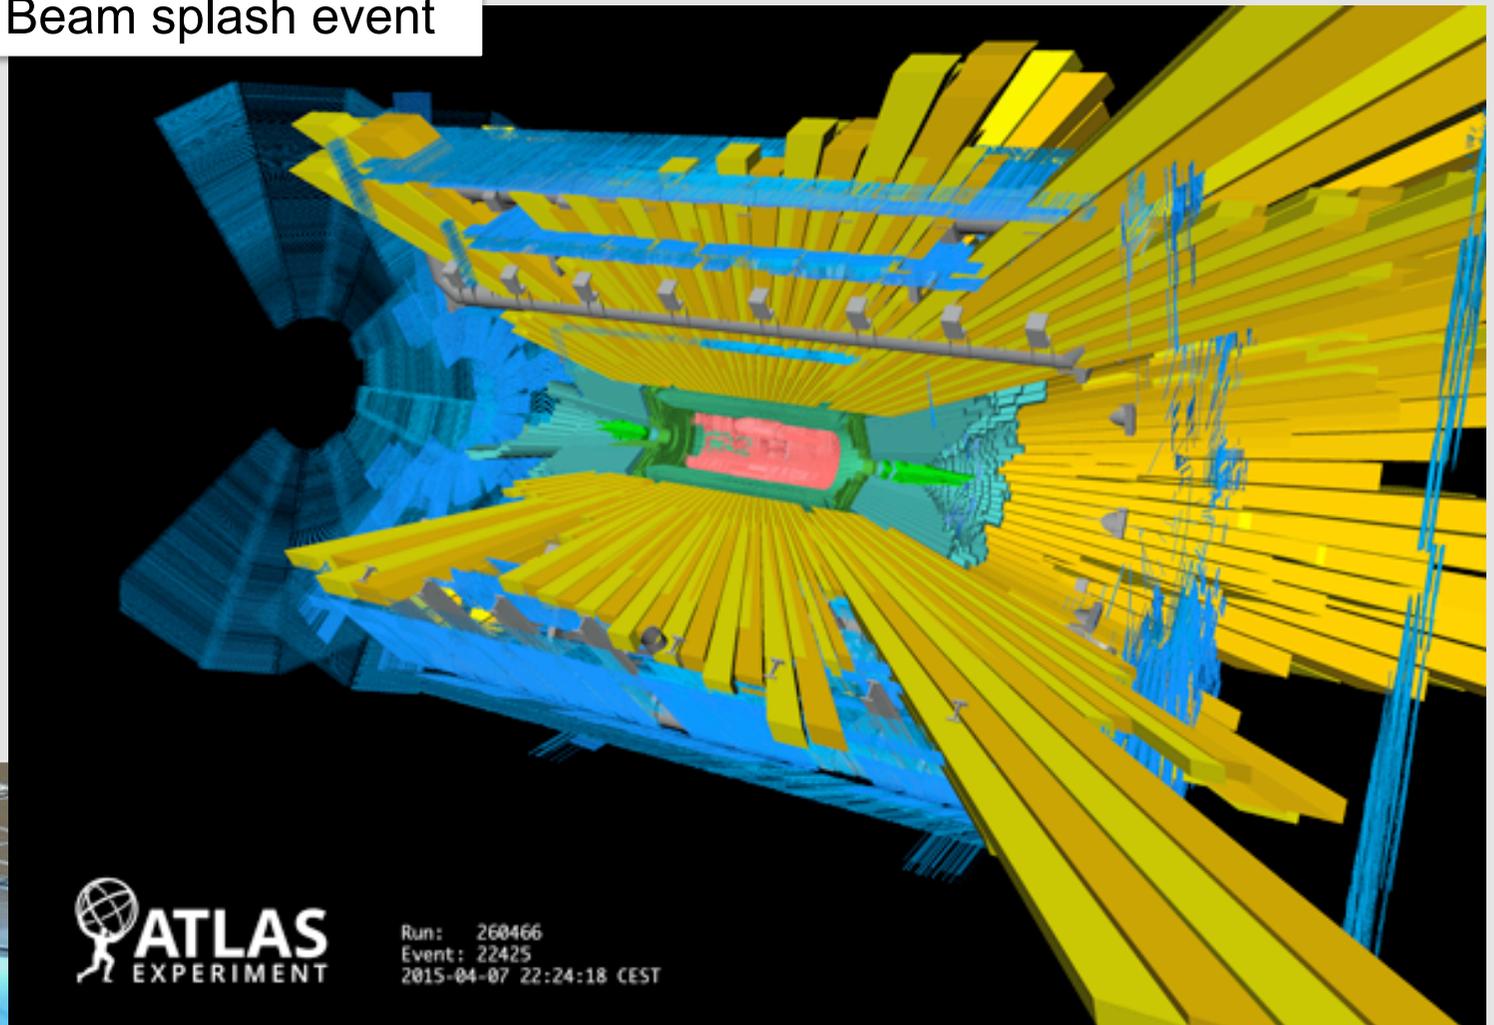

Mid- October: Physics programme to restart at the SPS

**Early 2015: Beam back into the Large Hadron Collider (LHC)**

**Spring 2015: Physics programme to restart at the LHC experiments**

**Commissioning della «nuova macchina» da gennaio 2015**

# Beam splash event

# First stable beams, 3 June

## PROTON PHYSICS: STABLE BEAMS

# Physics data dal 3 Giugno

## Short summary of the data:

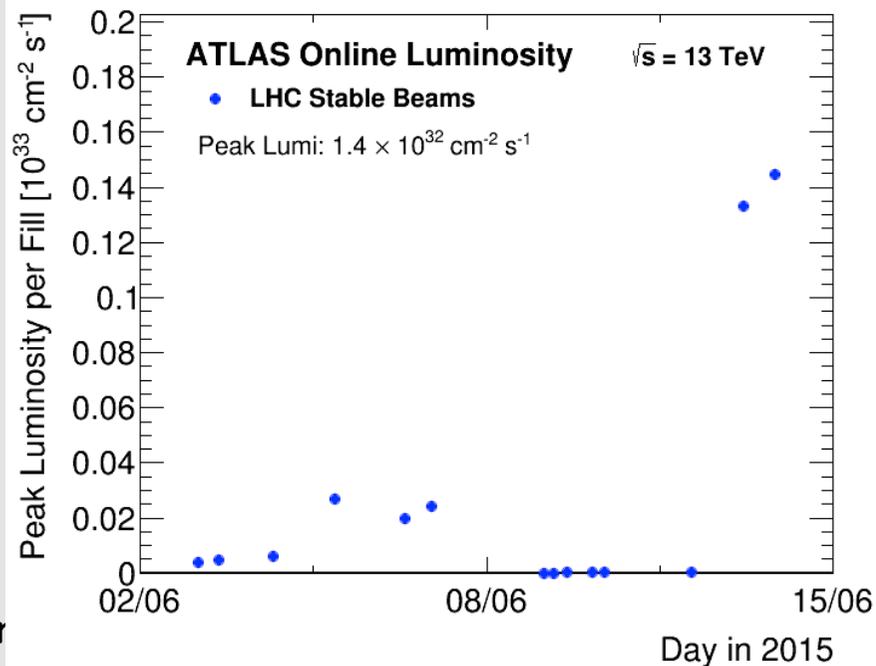

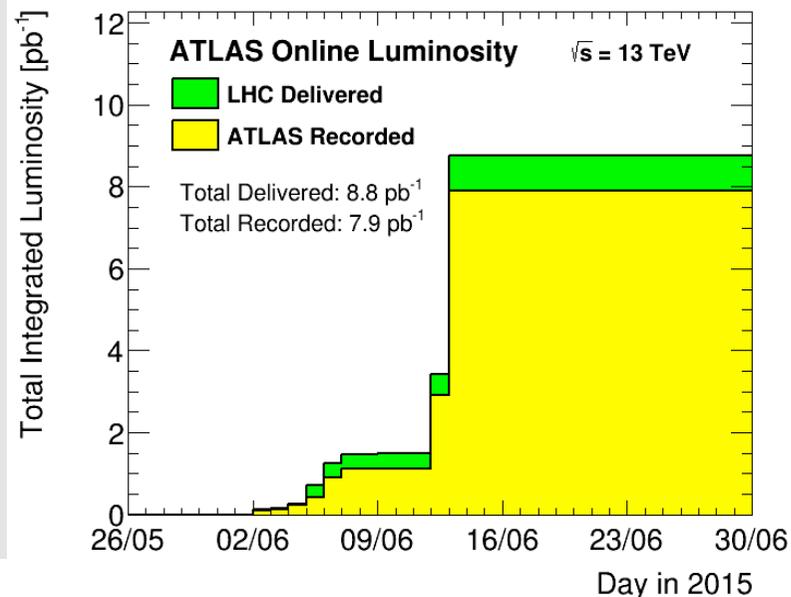

### Intensity ramp-up

- 3 fills with 2 colliding bunches
- 3 fills with 8/6 colliding bunches
- 2 fills with 38 colliding bunches

Total  $\sim 8 \text{ pb}^{-1}$  delivered

### Low- $\mu$ running

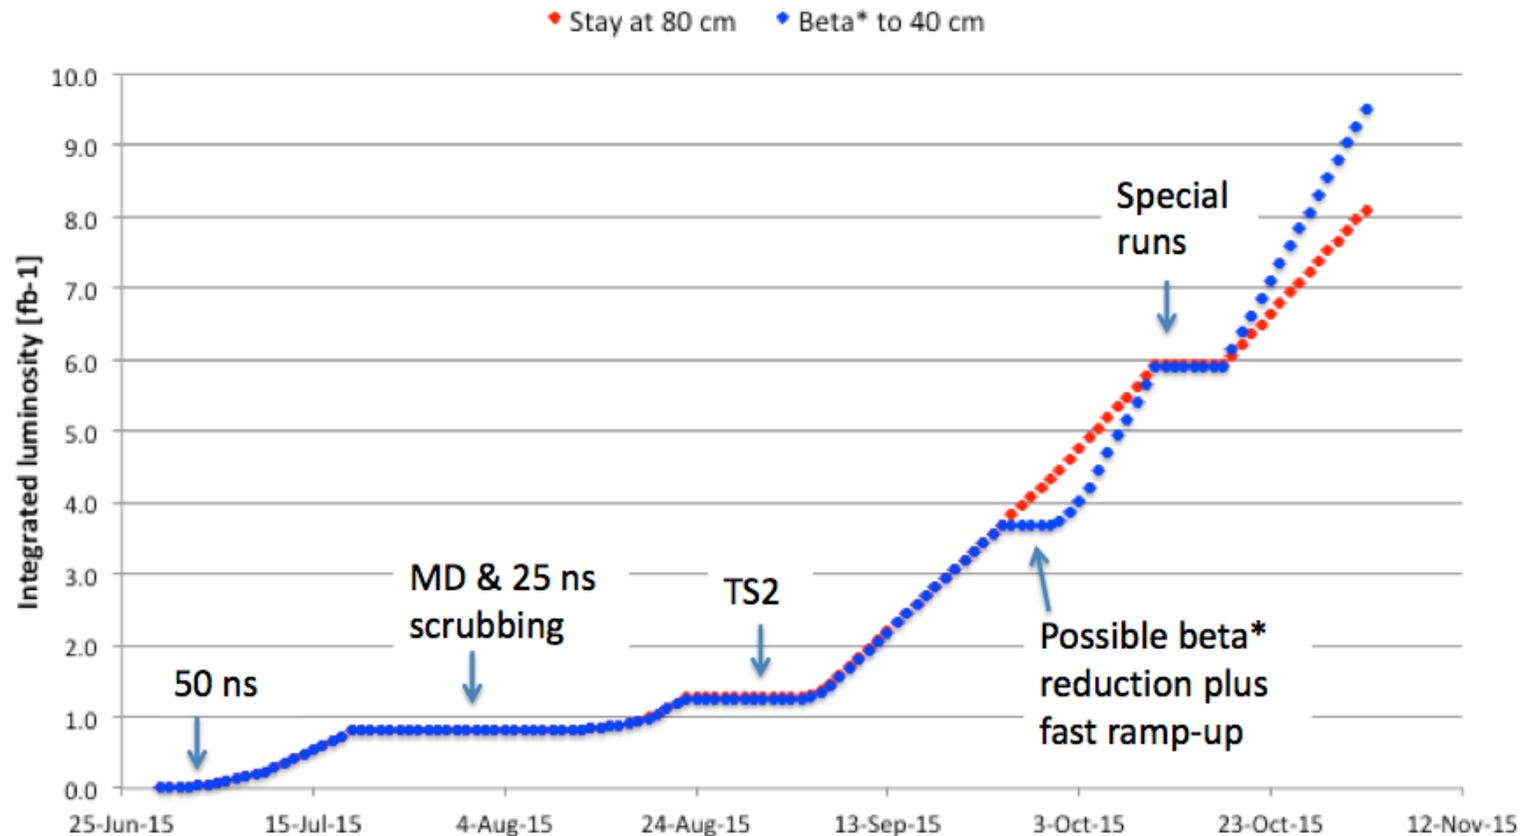

- $\sim 7\text{h}$  with  $\mu \sim 0.01$
- $\sim 27\text{h}$  with  $\mu \sim 0.03$

Luminosita` integrata:  $8 \text{ pb}^{-1}$   
Peak Lumi:  $1.4 \times 10^{34} \text{ cm}^{-2} \text{ s}^{-1}$

# Luminosita` da qui alla fine dell'anno...

- 50 ns running: 21 days / 25 ns running: 70 days (split in  $\beta^* = 80$  /  $\sim 40$  cm phases)

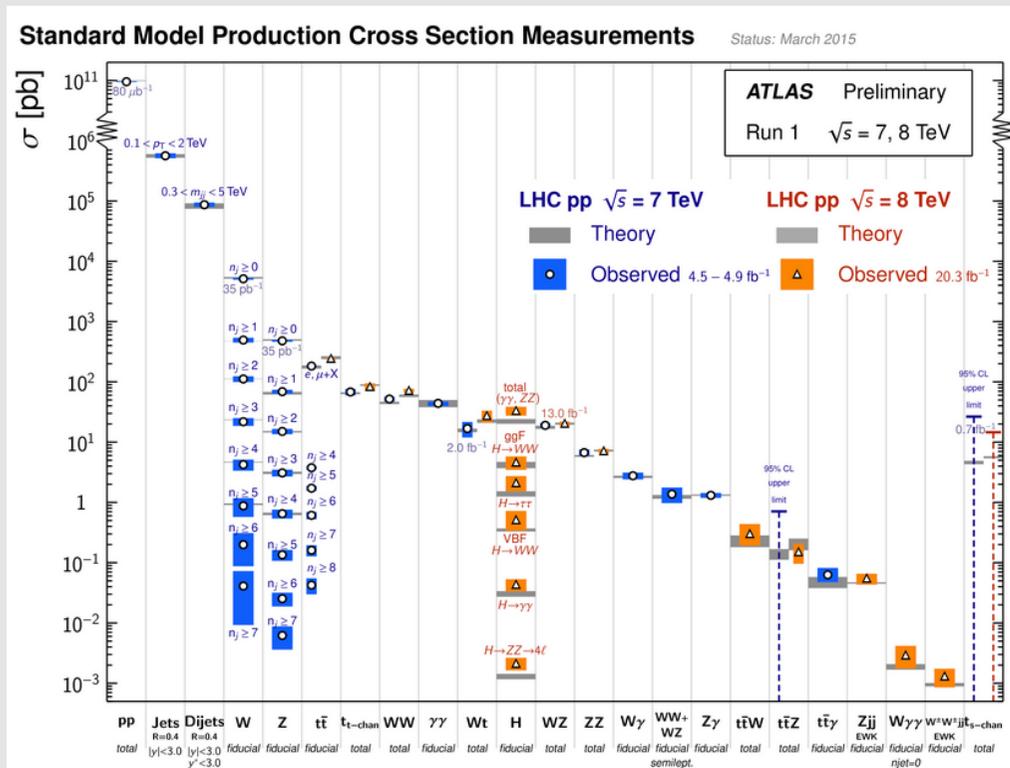

Including intensity ramp-ups and steadily increasing physics efficiency

# TileCal - presente

Lavoro di sostituzione LVPS + lavoro di consolidazione FrontEnd completato

Noise piu` gaussiano e nessun trip osservato fino ad ora !

Situazione considerevolmente migliorata (avevamo 0.6 trip/pb\*\*-1)

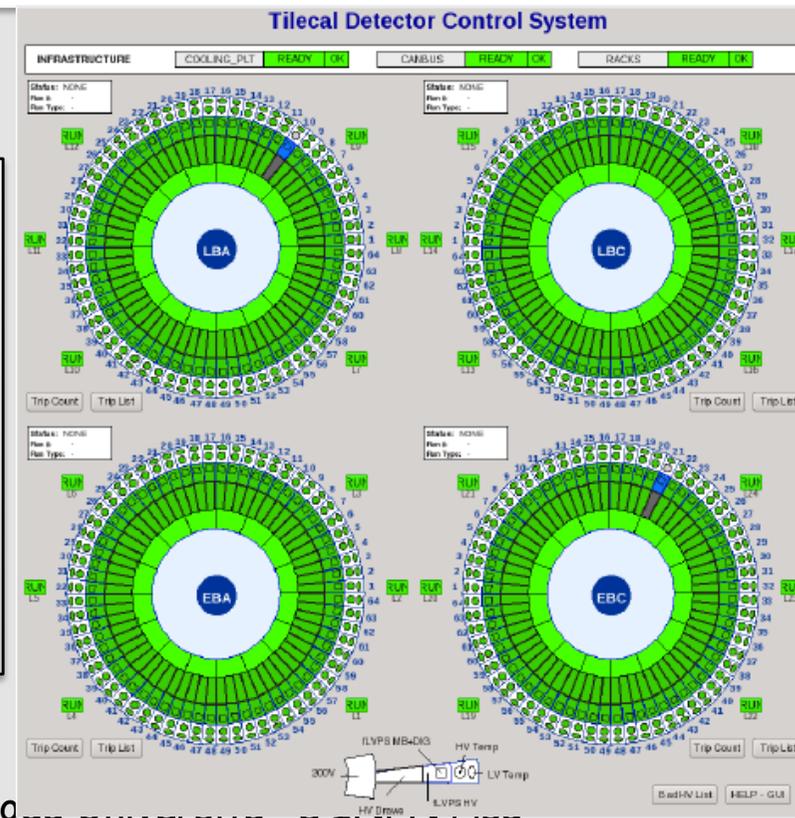

Two modules OFF:

LBA10, EBC21.

- LBA10, lost when we lost access on A side, August 25 th, 2014.

- EBC21 was lost around mid-April. fLVPS motherboard-side not starting.

0.8 % cells masked (all included in MC15)

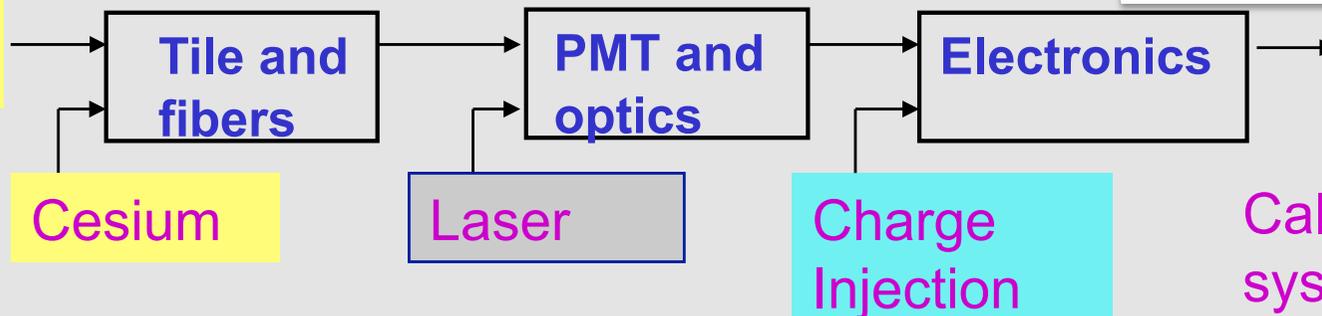

Dalla presentazione dello scorso anno

# LASER II system

S. Leone, F.Scuri

Physics event

Calibration systems

LASER events: prese dati dedicate check/calibration PMT gain + interBunch data. La stabilita` del sistema di distribuzione di luce e` minore di quanto desiderato → al momento si utilizza un sistema relativo di misura di variazione del guadagno.

## Miglioramento del sistema rispetto a quello esistente:

- Elettronica di controllo (compatibilita nuovo protocollo di comunicazione LHC e con sistema di controllo del rivelatore)
- Sistema di monitoring (splitter, mixer, filtri e fotodiodi) della trasmissione e distribuzione luce laser ai singoli drawers (fino a 48 canali di read-out)
- Ottica di rinvio ed espansione del fascio laser nella "optics box (livello -1 della caverna di ATLAS – USA 15)  
**Responsabilità di Pisa (F.Scuri).**

# LASER II System

S. Leone, F.Scuri

Optic system designed,  
implemented and installed  
in USA15 from Pisa group  
(Sandra, Fabrizio)

Preventivi 2015 - 3 Luglio 2015

C.Roda Università e INFN Pisa

# LASER II System performance

	TDAQ (Oct.27-Dec.5, '14)		Stand-alone (Jan.17-Feb.4,'15)	
	Typical stability (%)	Upper limit (%)	Typical stability (%)	Upper limit(%)
Laser monitors (D0-D1-D2)	0.6	0.6 <sup>a)</sup>	0.1	0.4
Filter wheel monit. (D3-D4-D5)	0.5	0.7 <sup>a)</sup>	0.7	1.5 <sup>b)</sup>
Expander monitors (D6-D7-D8-D9)	0.7	1.0 <sup>a)</sup>	0.7	1.5 <sup>b)</sup>

<sup>a)</sup> Only a few intensity/filter configurations studied

<sup>b)</sup> 1.5% due to one bad filter in the optical line, otherwise 0.7%

Optic line performance according to requirements !

A second LASER II system is being assembled in a Laboratory on surface to allow:

- Checking problems detected on the detector in the pit;
- to use as source for the development of the new FE electronic for phasell.

Optic system under is a replica of the LASERII system in the pit and is under Pisa responsibility → request for optic material to complete assembly.

All the expertise acquired on TileCal calibration in the LASERII development has allowed F.Scuri to become co-convener for the TileCal calibration

# Fasell per TileCal

Il programma di fasell per TileCal richiede di sostituire tutta l'elettronica di FE, PS.

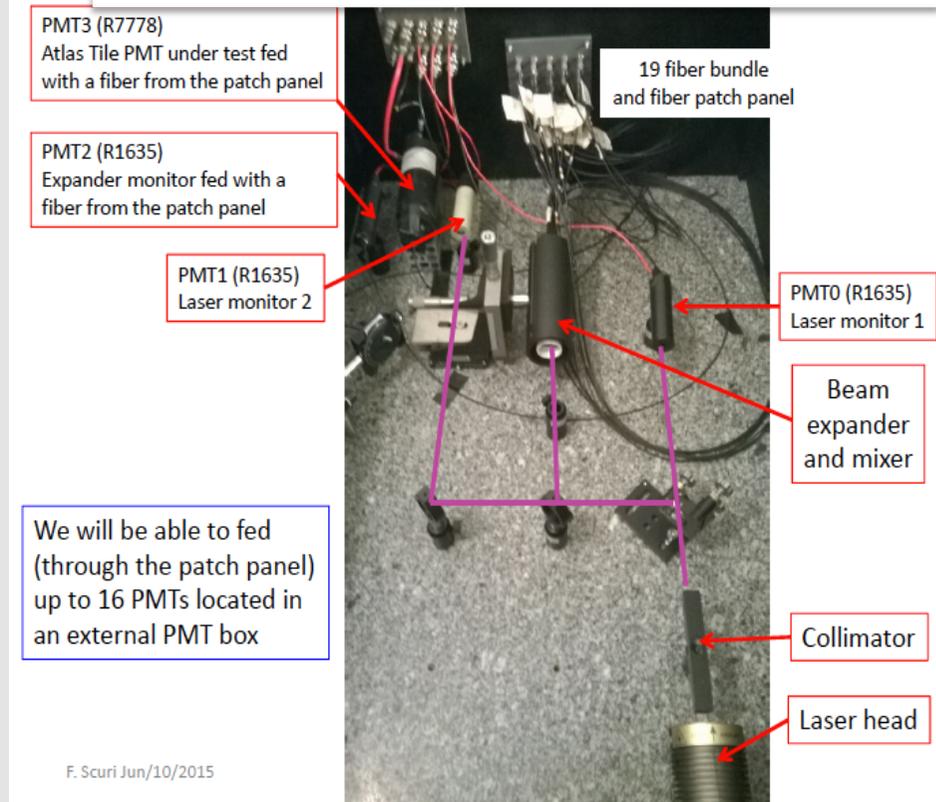

**Programma di Pisa** – discusso lo scorso anno:

- Studio a lungo termine (stabilita` e linearita`) dei PMT nelle condizioni di lavoro della fase2;
- Qualificazione partitori attivi;
- Qualificazione dei sistemi 3 (UChicago, CFerrand, Argonne) sistemi di readout FE;

## Stato del programma:

- Performances linea ottica misurate a Pisa nel periodo di commissioning appena finito e uguali a quelle ottenute al CERN;
- Tasca di 50keuro nel periodo 2014-2018 approvata dai referees a Maggio 2014.

## Test stand in Pisa Lab

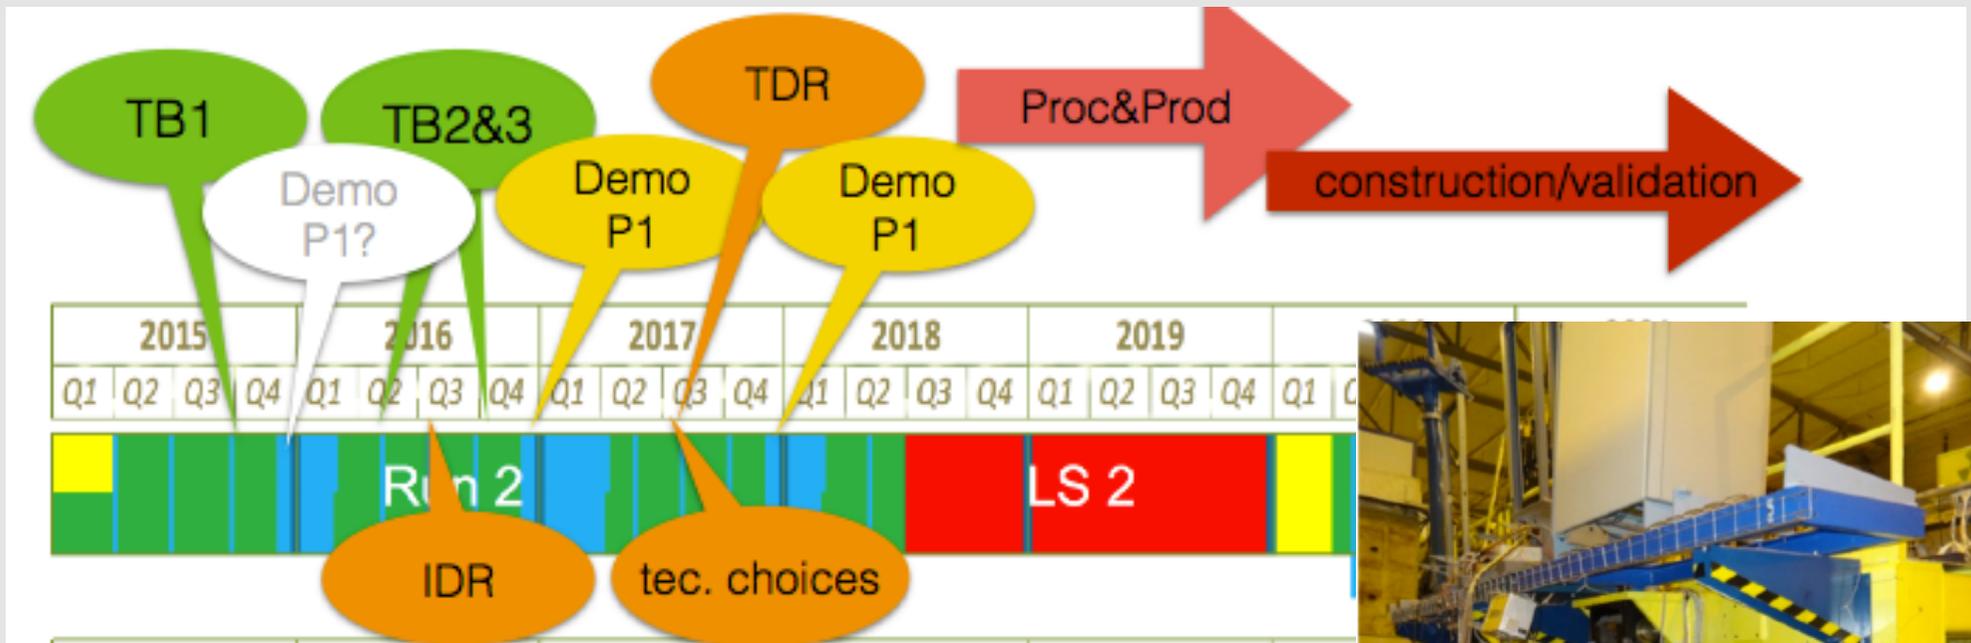

Program: different repetition rates of the laser pulsing to mimic average anode currents:

- @ 2 KHz rep. rate (0.4  $\mu$ A max. average anode current) – std conditions
- Varying repetition rates : 2 -200 KHz (0.4 - 40  $\mu$ A average current)  $\rightarrow$  linearity response of passive and active dividers;
- @ 0.1-1 MHz rep. rate  $\rightarrow$  **in 3-4 months integrate LHC-II current;**

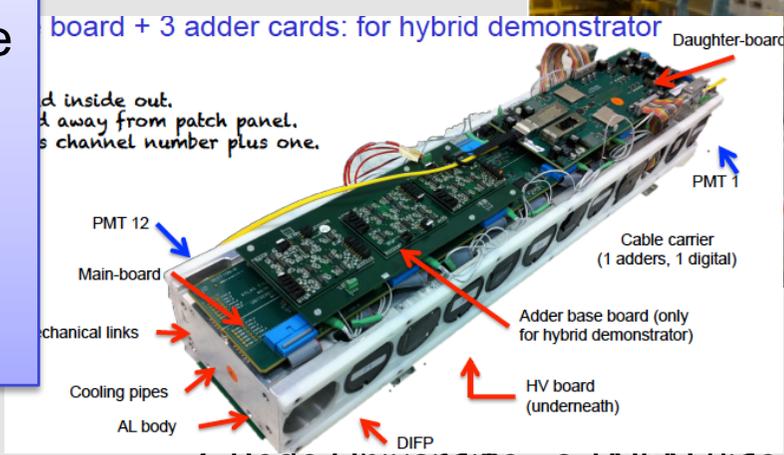

Concerns: laser lifetime and stability of the pulse energy  $\rightarrow$  request for material

# TileCal Fasell: Test beam

The whole new system for the read-out (FE, Cooling, Mechanics) will be tested in a TB program in 2015-2016

We are requested to participate as part of the FE boards testing group

Preventivi 2015 - 3 Luglio 2015

# TileCal –Richieste

## Fasel

- LaserII optic beam in Lab175 (filtri, beam expander, meccanica di supporto ottica): 5 keuro

## Fasell

- Alimentatori bassa tensione 4 canali – 5 keuro
- 1 generatore di forme d'onda 10 keuro

**Tecnici per lavoro di maintenance durante lo shutdown (4weeks x 2 tecnici end 2016)**

# Fast Tracker - FTK

FTK funzionerà alla frequenza di LVL1 (100kHz) e fornirà in circa 100  $\mu$ s una ricostruzione completa delle tracce ( $p_T > 1$  GeV) all'ingresso del LVL2

Un progetto con una forte impronta pisana:

P. Giannetti - Technical Coordinator

A. Annovi - Project Leader di FTK

M. Piendibene - responsabile dell'AMB

S. Citraro - responsabile della LAMB

P. Luciano – responsabile AM FirmWare

C. Sotiropoulou – responsabile monitoring FirmWare

G. Volpi - responsabile SW

ATLAS Collaboration Week, CERN, June 18, 2015

# FTK Algorithms

FTK has a custom clustering algorithm, running on FPGAs

Data are geometrically distributed to the processing units and compared to existing track patterns.

Good 8-layer tracks are extrapolated to additional layers, improving the fit

$$p_i = \sum_j C_{ij} \cdot x_j + q_i$$

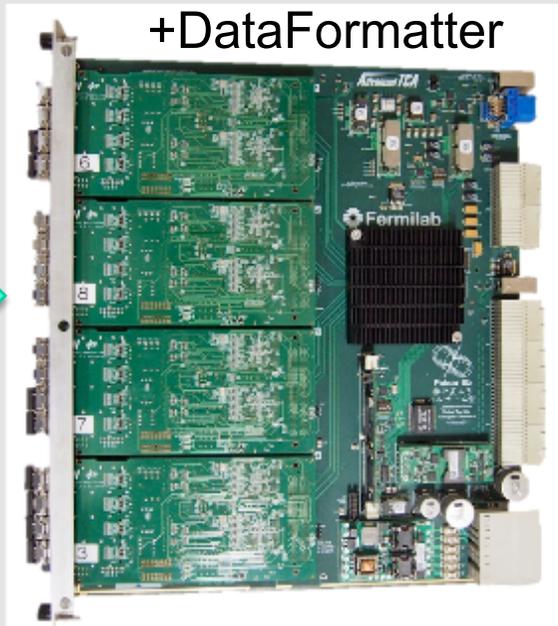

$$\chi^2 = \sum_i \left( \sum_j A_{ij} \cdot x_j + k_i \right)^2$$

Pattern matching limited to 8 layers: 3 pixels + 5 SCTs. Hits compared at reduced resolution.

Full hits precision restored in good roads. Fits reduced to scalar products.

# AMBSLP

AMB distributes SSs to 64 AMchips

- ~800 Serial Links @ 2Gb/s
  - VME
  - Clock @100MHz
  - Supply Voltages:  
48 V → 12V →  
2,5V  
1,8 V  
1,2V  
1V

Power consumption.  
~ 250 Watt

# AMBoard e AMChip schedule

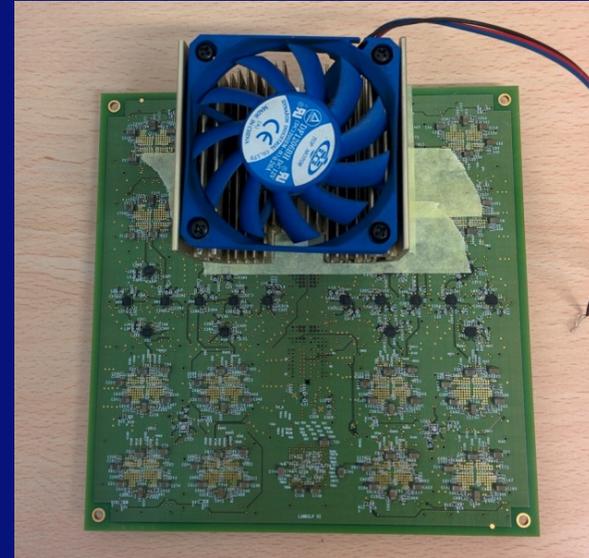

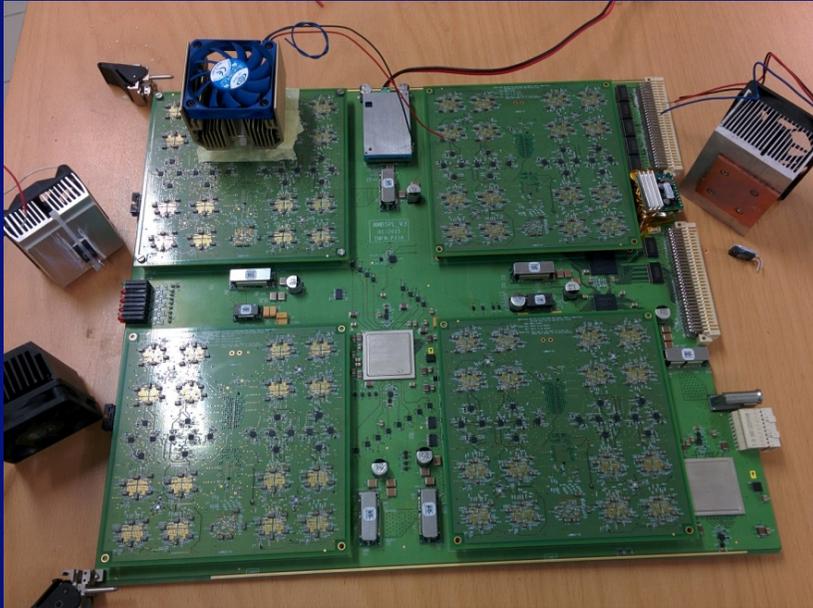

## AMchip06 (~11x15 mm<sup>2</sup> TSMC 65nm)

- Sent to TSMC company for fabrication on June 17
- Last checks at companies on going
- First chip out expected for September-October

## AM board

- Design being prepared without final AM06 in hand
  - Difference w.r. to AM05: higher pattern density, power consumption x64
- Final Design Report held in May
- Cooling measurements this summer
- Preparing final candidate prototype

# Power Distribution Stress Test

- Used passive Loads( $0.02 \Omega$ )  $\rightarrow$  50 Watt each per LAMB
- 34 Watt Exp. Power (per LAMB with AMchip06)
- Functioning still ok with additional power

# Cooling tests a USA15

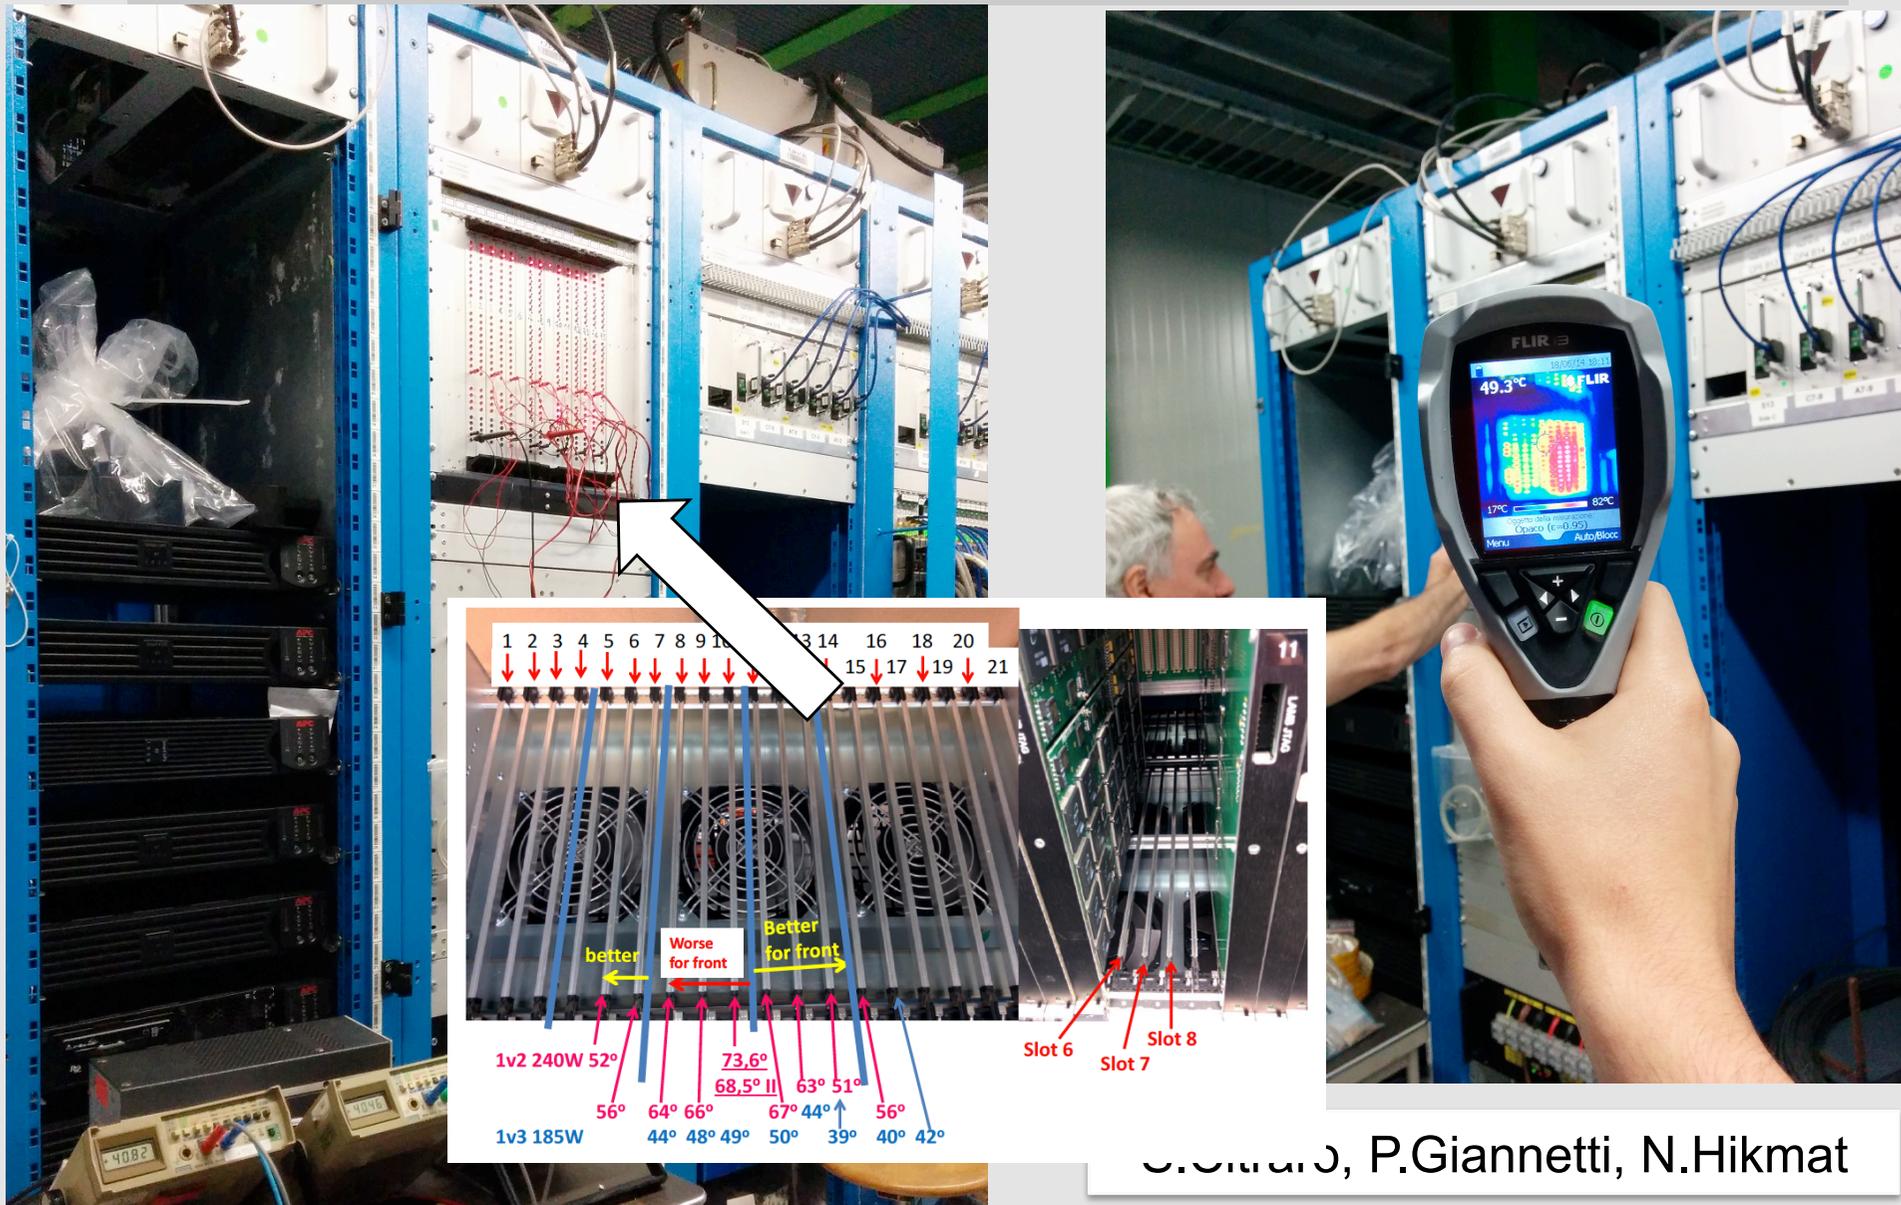

Preventivi 2015 - 3 Luglio 2015

S.Citraro, P.Giannetti, N.Hikmat

C.Roda Università e INFN Pisa

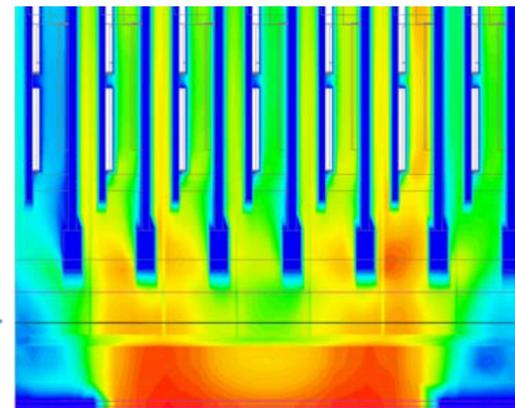

# Cooling tests a USA15

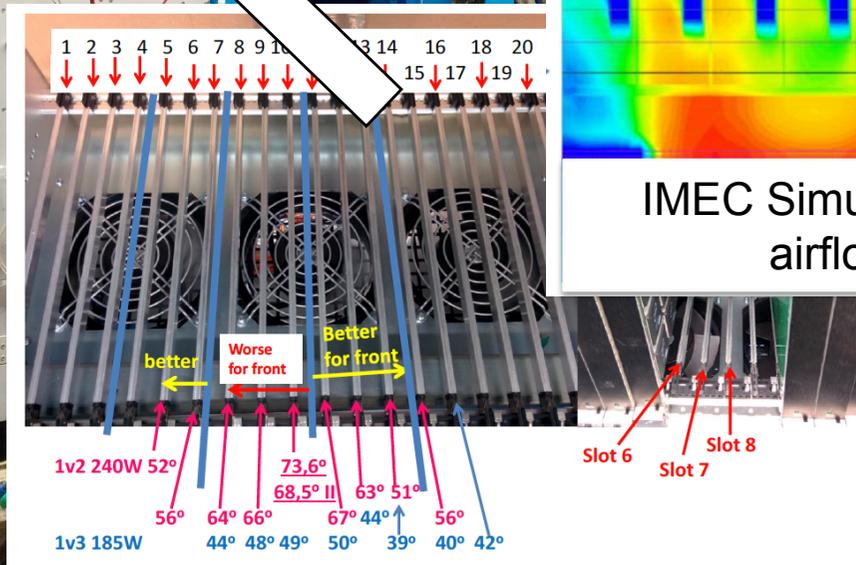

S. Suardi, P. Giannetti, N. Hikmat

# Cooling tests a USA15

Simulation is very important since AMBoard prototype is being developed without AMChip06 in Hands  
Simulation is not consistent with measurements

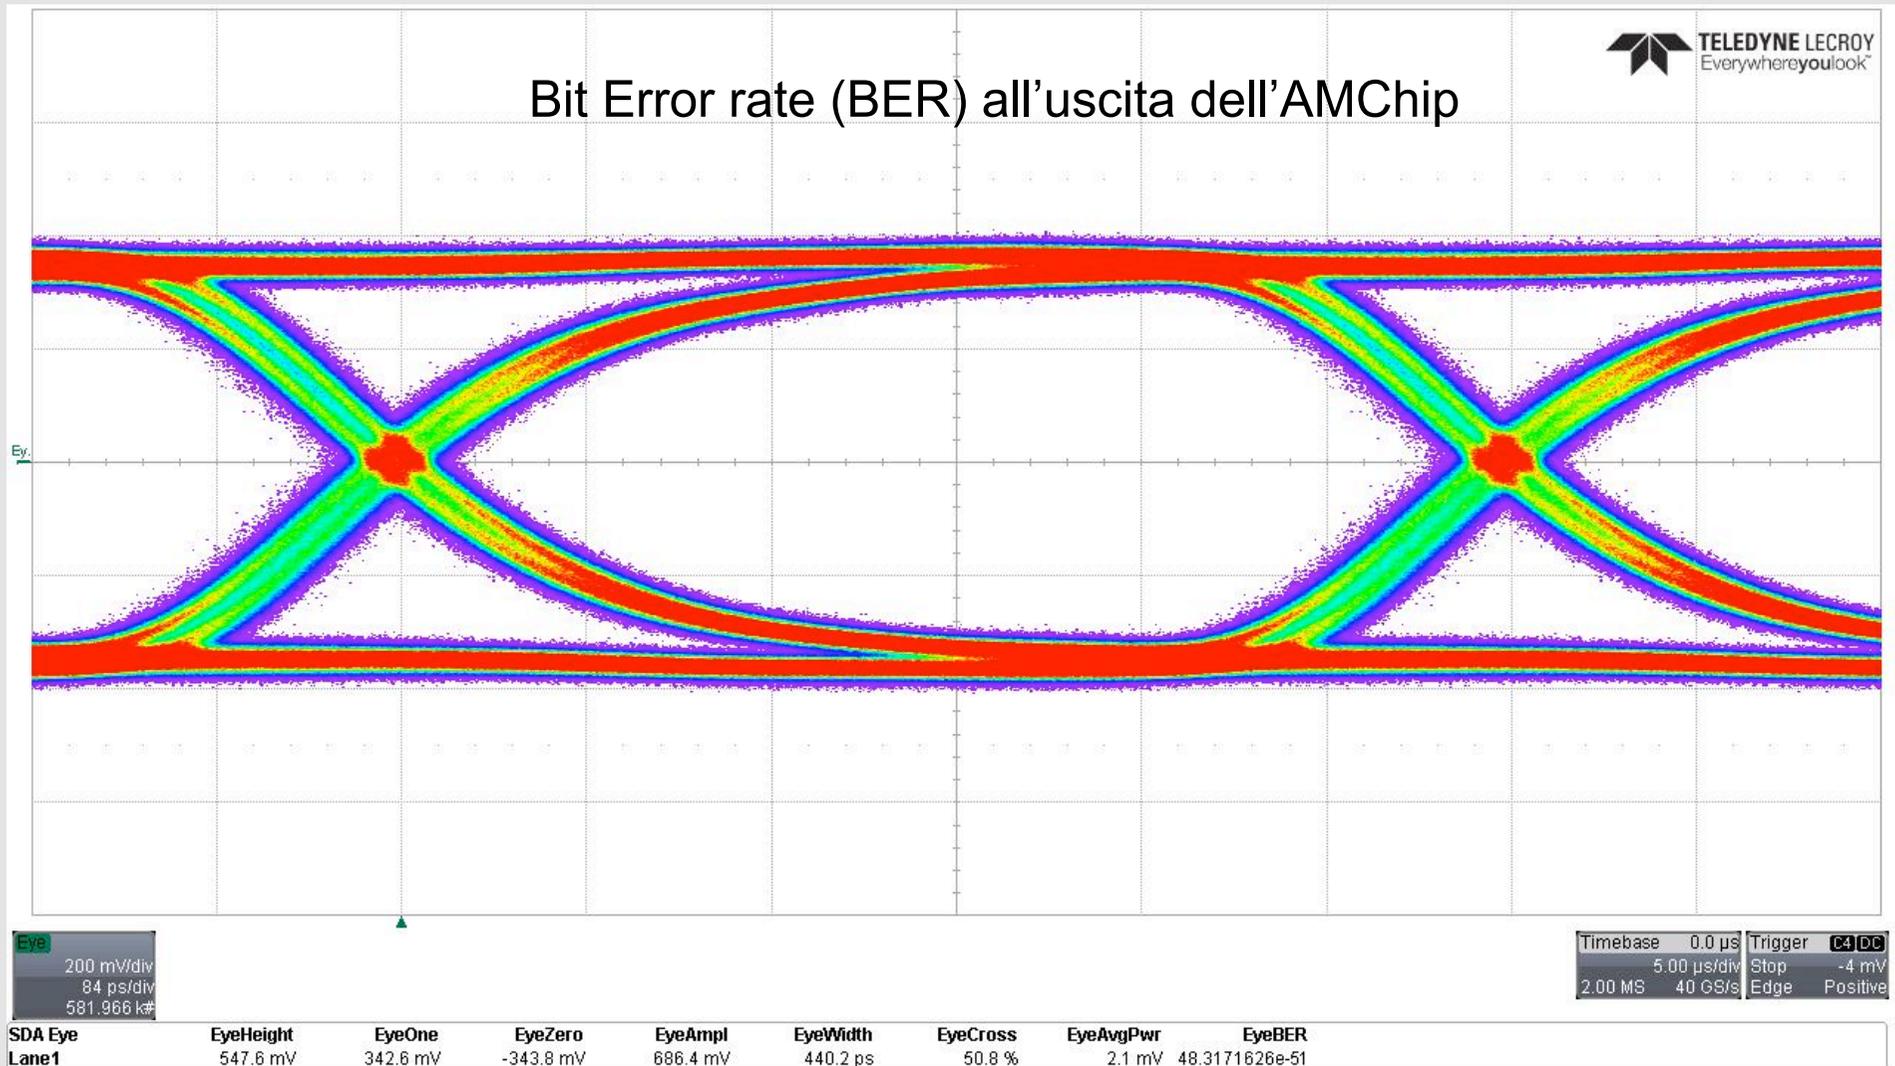

IMEC Simulation of airflow

C. Suardi, P. Giannetti, N. Hikmat

# Test sull'integrità` del segnale

S.Citraro, P.Giannetti, N.Hikmat

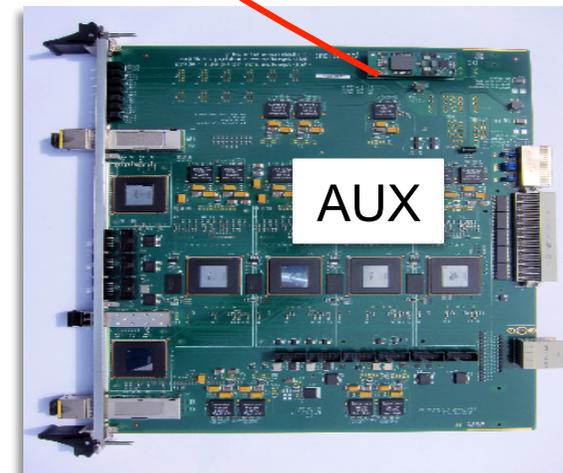

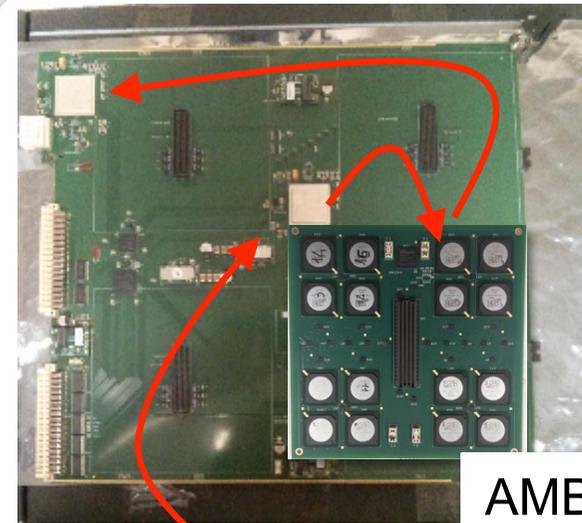

# Test piu` complessi: funzionalita`

A.Annovi, N.Biesuz, G.Volpi, P.Giannetti

- Test con eventi simulazione semplificati
  - AUX → AMBoard → AMChip05 → AMBoard
  - Test con serie di hit → singola Road
- Risultato: Confronto bit-bit con simulazione non si osservano discrepanze

Progetto PRA (S.Donati) di 40keuro

Attivita multidisciplinare: utilizzo di Memorie associative per l'analisi veloce di immagini (WP5 in IAPP)

# FTK schedule

- **1<sup>st</sup> step** combination of **production & prototypes boards**
- **2<sup>nd</sup> and 3<sup>rd</sup> steps** all boards from production except AM board

Success oriented

# LHC - longer term schedule

Recently there have been discussions at CERN in the context of the “Medium-Term Plan” (5-year plan, covering 2016-20), which is being discussed this Council week

It is not yet confirmed, but it is likely that:

- The start of LS2 will be delayed by 6 months → end-2018 (from mid-2018)
- LS2 will be extended by 6 months → end of LS2 would be end-2020 (previously end-2019), Run-3 would start in 2021
- Knock-on changes further ahead - LS3 could shift → early-2024 to mid-2026

# Limits on QGC

$$WV\gamma \rightarrow lv+jj+\gamma \quad p_{Tj}, p_{T\gamma} > 30\text{GeV}$$

- Main bkg  $W\gamma$ +jet with large uncertainty
- Observed upper limit is  $3.4 \times \text{SMc.s}$  at 95%CL
- Large improvement w.r. to previous QGC limits and **first limits** on  $f_{T,0}$  ( $WW\gamma\gamma$ ) and  $\kappa_0^W, \kappa_C^W$  ( $WWZ\gamma$ )

July 2013 LEP L3 limits D0 limits

Channel	Limits	L	$\sqrt{s}$
$WW\gamma$	$[-15000, 15000]$	$0.43\text{fb}^{-1}$	0.20 TeV
$\gamma\gamma \rightarrow WW$	$[-430, 430]$	$9.70\text{fb}^{-1}$	1.96 TeV
$WW\gamma$	$[-21, 20]$	$19.30\text{fb}^{-1}$	8.0 TeV
$\gamma\gamma \rightarrow WW$	$[-4, 4]$	$5.05\text{fb}^{-1}$	7.0 TeV

Channel	Limits	L	$\sqrt{s}$
$WW\gamma$	$[-48000, 26000]$	$0.43\text{fb}^{-1}$	0.20 TeV
$\gamma\gamma \rightarrow WW$	$[-1500, 1500]$	$9.70\text{fb}^{-1}$	1.96 TeV
$WW\gamma$	$[-34, 32]$	$19.30\text{fb}^{-1}$	8.0 TeV
$\gamma\gamma \rightarrow WW$	$[-15, 15]$	$5.05\text{fb}^{-1}$	7.0 TeV

Channel	Limits	L	$\sqrt{s}$
$WW\gamma$	$[-25, 24]$	$19.30\text{fb}^{-1}$	8.0 TeV

Legend:  $a_0^W/\Lambda^2 \text{ TeV}^{-2}$ ,  $a_C^W/\Lambda^2 \text{ TeV}^{-2}$ ,  $f_{T,0}/\Lambda^4 \text{ TeV}^{-4}$

CMS

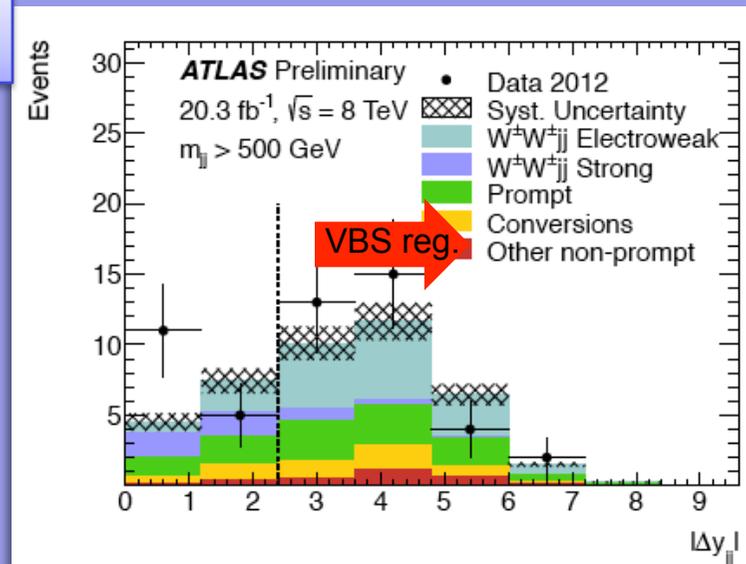

$$W^\pm W^\pm jj \rightarrow lv+l'v+jj \quad p_{Tj} > 30\text{GeV} \quad M_{jj} > 500\text{ GeV}$$

- In same sign WW production the strong production does not dominate over EWK production
- **First evidence of  $W^\pm W^\pm jj$  @  $4.5\sigma$  (EWK+Strong)** and of EWK  $W^\pm W^\pm jj$  @  $3.6\sigma$  at 95%CL  
 $\sigma = 1.3 \pm 0.4 \pm 0.2 \text{ fb}$  (VBS region)

- **First limits on  $\alpha_4 \alpha_5$  QGC parameters:**

$$-0.14 < \alpha_4 < 0.16$$

$$-0.23 < \alpha_5 < 0.24$$

ATLAS

# AM board cooling challenges

89 °C +/- uncertainty

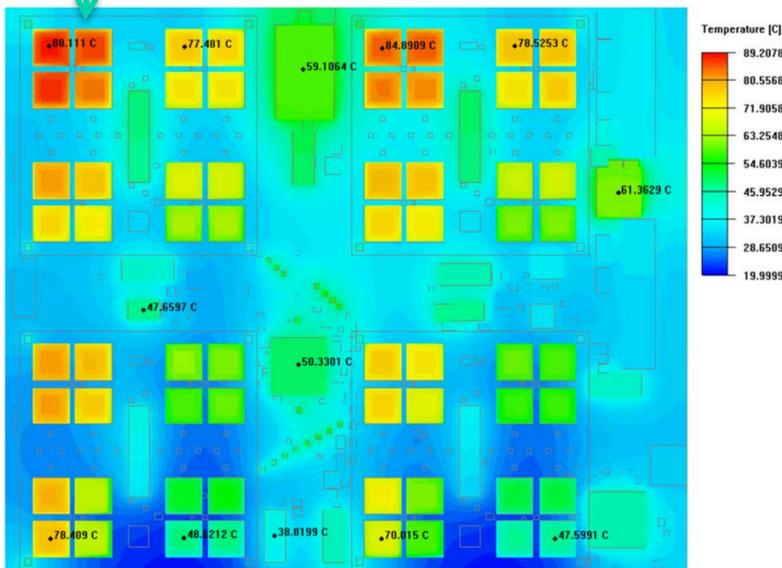

Figure 6: Same view as Figure 1 for input velocity with pwl-profile A with maximum velocity  $v_{y,max} = 4\text{m/s}$

~250W per board (at peak usage)

- 16 AMB / crate
- 3-6 slots with low airflow (see left figures)
  - 15 slots with better airflow
- Investigating AMB cooling without AMchips in hand
- Cooling measurements using CDF AM chips
- Will re-measure with AMB loaded with AM06

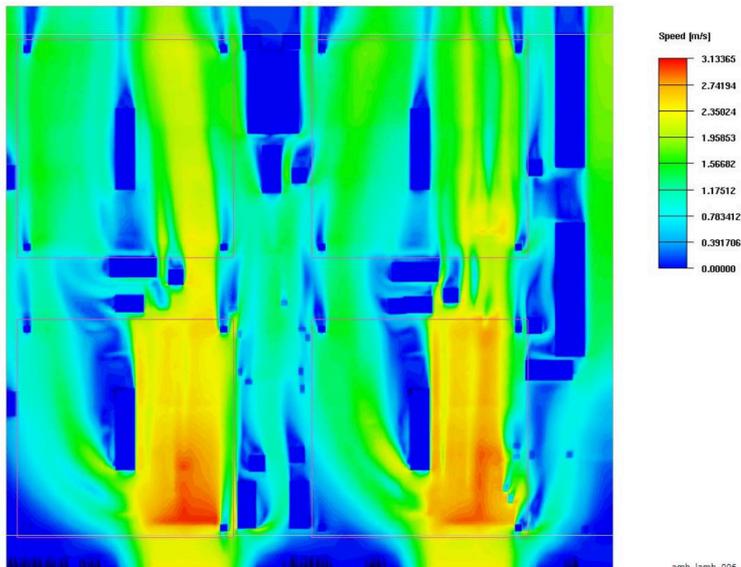

Figure 7: air speed at cross section in the middle of the model (Case A'' 2.4 m/s, see Figure 4)

IMEC simulations

Airflow to different slots
